Prospectus responsibility

The Board of Directors hereby declares:

- that to the best of our knowledge the information contained in this prospectus is accurate and no omission has been made that has affected the accuracy of such information, and
- that to the best of our knowledge the prospectus contains any and all material information which may be significant to the Investment Fund's potential investors.

Approved by the Board of Directors on 30 May 2024.

PROSPECTUS

Invitation to subscribe for units in Investeringsforeningen Sydinvest.

This prospectus was published on 31 May 2024.

1. Name and address

Investeringsforeningen
Sydinvest
Peberlyk 4
6200 Aabenraa, Denmark

Tel: +45 74 37 33 00
Fax: +45 74 37 35 74
Email: si@sydinvest.dk
Website: www.sydinvest.dk (funds with no unit classes and unit class A)
www.sydinvest.de and www.sydinvest.com (unit class B)
www.sydinvest-em.com (unit class I)
www.sydinvest-engros.dk (unit class W)

The Investment Fund was established on 21 September 1987.
The CVR number of the Investment Fund is 24260534.

The Investment Fund is registered with and approved by the competent supervisory authority under FSA no. 11040:
Finanstilsynet (Danish FSA)
Strandgade 29
1401 Copenhagen K, Denmark

Tel: +45 33 55 82 82
Email: finanstilsynet@ftnet.dk
Website: www.ftnet.dk.

The Investment Fund's funds and unit classes are approved by and registered with the Danish FSA.

2. Objects

In accordance with the provisions of the Articles of Association, the objects of the Investment Fund are from the public, cf Article 6 of the Articles of Association, to receive funds which according to a principle of risk diversification are placed in instruments in compliance with Part 14 of the Danish Investment Associations, etc. Act and to redeem on the demand of a unit holder that unit holder's share of the assets by using funds deriving therefrom, cf Article 12 of the Articles of Association.

On the basis thereof the funds are invested with the aim of achieving adequate risk diversification and satisfactory return.

3. Important issues

The following should be noted:

- The expectations or the historical returns mentioned under the individual funds do not purport to be a guarantee of future returns.
- This prospectus is prepared in compliance with Danish rules and legislation. The prospectus has been submitted to the Danish FSA. The Danish statutory provisions applying to the Investment Fund correspond to EC Directive 85/611/EEC of 20 December 1985 as amended by eg Directive 2009/65/EC of 13 July 2009 (UCITS IV Directive) and Directive 2014/91/EU of 23 July 2014 (UCITS V Directive).
- The Investment Fund's listed funds and unit classes (unit classes A) are UCITS ETFs as they are UCITS in accordance with the UCITS Directive and ETFs as they comply with the criteria of the MiFID II Directive. As a rule UCITS ETF units purchased on the secondary market cannot be sold directly back to the UCITS ETF. Investors must buy and sell units on a secondary market by means of a securities dealer (eg a stockbroker) and may have to pay fees in this connection. Furthermore investors may pay more than the current NAV when they buy units and receive less than the present NAV when they sell units.
- All funds are subject to the EU savings tax directive. The funds mentioned in 5.1 and 6.1, which invest in bonds, place more than 25% of assets in interest earning assets which are subject to the EU savings tax directive. The funds mentioned in 5.1.11 and 6.2, which invest in equities, place less than 25% of assets in interest earning assets which are subject to the EU savings tax directive.

- It will appear from each fund if a marketing notification has been submitted for countries outside Denmark. If the fund is divided into unit classes, it will appear from each unit class for which countries a marketing notification has been submitted.
- This prospectus is prepared in Danish and translated into German and English. In case of discrepancy the Danish version applies.
- The Board of Directors may change the contents of this prospectus, including investment policies and risk profiles, within the limitations of legislation and the Articles of Association. This prospectus replaces all previous versions of the prospectus and is valid from the date of publication.
- The information in this prospectus cannot be considered to be advice regarding investments or other issues. Investors are encouraged to seek individual advice on investment and tax issues as well as related matters. The prospectus is not an offer to purchase or an invitation to make offers.
- The distribution of this prospectus and the offering for sale of units in certain countries are limited by existing local legislation. Individuals who receive the prospectus are requested to enquire about and observe such limitations. The units comprised by this prospectus may not be offered for sale or sold in USA or Canada and this prospectus may not be provided to investors domiciled in or similarly associated with these countries.
- Investments in units are not equivalent to a cash investment and the value is not guaranteed. Therefore at any point in time units in a fund or a unit class may be below, equal to or above the value at the time of investment.
- Investments in foreign markets may be less safe than investments in the Danish market as a consequence of company-specific, political, regulatory, market-related and/or overall economic circumstances. Furthermore investments abroad represent exposure to currencies which may fluctuate at varying intervals against DKK.
- Selecting a benchmark constitutes a large and well-known challenge to Danish bond funds. The challenge consists in whether to include government bonds as well as mortgage bonds in the benchmark. Danish bond funds are often managed on the basis of interest rate risk which is most accurately reflected by benchmarks that consist solely of government bonds. Mortgage bonds make up a large part of the Danish bond market and many of these bonds entail a prepayment risk in addition to the interest rate risk. There are indices that reflect the specific risk in the mortgage market but each of them has shortcomings as regards changes in the interest rate risk and considerable bond reallocations in the indices. Consequently we have chosen a benchmark which consists exclusively of government bonds because it reflects the interest rate risk in the fund while providing the best basis of a fair assessment of the return quality in the fund when taking into account the costs associated with the fund's investments.
- According to the regulation of the European Parliament and of the Council on indices used as benchmarks, benchmark administrators must be authorised and included in ESMA's public register. Third country administrators must be authorised and registered no later than on 31 December 2025. Where a benchmark administrator used is registered in ESMA's public register, this information will be published in this prospectus.

The following benchmark administrators used have not yet been included in ESMA's public register:

Nordea Market, ICE BofA, MSCI, Nasdaq, Barclays, JP Morgan and Morningstar

- Additional information about the Investment Fund and its portfolio, including monthly lists of portfolios, is accessible at sydinvest.dk.

4. General issues applying to all funds and unit classes of the Investment Fund

Investeringsforeningen Sydinvest is divided into funds as described below. The capital of each fund must be placed in compliance with the provisions of Parts 14 and 15 of the Danish Investment Associations, etc. Act.

Unless the paragraphs on the individual funds state otherwise, the following will moreover apply:

- The financial instruments in which the funds invest must be admitted to trading on the following markets:
 - Markets in European Union member states.
 - Markets in states with which the Community has concluded an agreement.
 - World Federation of Exchanges member markets.
 - Full member markets or associate member markets of FESE.
 - Regulated markets included in the EU Commission's list.
 - Markets approved by the Danish FSA or considered by the Investment Fund to adhere to the guidelines of the Danish FSA.
- The Board of Directors has approved exchanges and markets for investments by the funds in compliance with the guidelines of the Danish FSA. The approved markets appear from Appendix 1 to the Articles of Association of the Investment Fund.
- Equity-based funds may use derivatives on a covered basis. The use of derivatives is not expected to change the risk profile of the fund. Moreover the fund Tyskland KL may use derivatives on an uncovered basis as described under this fund.
- Bond-based funds may use derivatives on a covered and uncovered basis, of the executive order to that effect issued by the Danish FSA. The use of derivatives is not expected to change the risk profile of the fund.

- Bond-based funds may not invest in listed or unlisted equities or equities listed on non-approved markets unless such equities are distributed in connection with a debt restructuring in the company invested in.
- All funds may have ancillary liquid assets, for instance deposit funds with a credit institution in accordance with the provisions of the Danish Investment Associations, etc. Act.
- Bond-based funds investing predominantly in bonds issued in foreign currency may invest up to 10% of assets in unlisted bonds or bonds listed on non-approved markets.
- All equity-based funds may invest up to 5% of assets in unlisted equities or equities on non-approved markets.
- All equity-based funds may invest a maximum of 10% of assets in a single company unless a different limitation appears from the description of the individual funds below.
- No equity-based fund may invest in mortgage bonds or corporate bonds with a credit quality lower than BB+.
- No equity-based fund may invest in government bonds with a credit quality lower than B+.
- All funds with the exception of Korte Obligationer KL, Fonde KL and Mellemlange Obligationer KL may invest up to 10% of their assets in units in other UCITS, funds or investment undertakings in accordance with the Danish Investment Associations, etc. Act.
- The Danish FSA has issued a standing approval to the Investment Fund to the effect that the individual funds of the Investment Fund may raise short-term loans of up to 10% of the fund's assets to provide interim financing in connection with transactions concluded.
- All funds may engage in securities lending collateralised by securities according to the Articles of Association. Whether this option is used appears from the description of the individual funds.
- If so requested by an investor, the investment management company of the Investment Fund will provide supplementary information relating to the fund regarding the quantitative limits applying to the risk management of the Investment Fund and regarding the methods chosen by the investment management company (or the Investment Fund) to ensure that these limits are complied with at all times, and regarding information on the latest developments in the most important risks and returns concerning the categories of the individual fund instruments.

4.1. Abbreviations

“KL” after the name of a fund denotes that the fund may be divided into unit classes, cf Article 7 of the Articles of Association of the Investment Fund. If a fund is divided into unit classes this is stated in the prospectus under each fund. The characteristics of the unit classes are described under each fund. The main characteristics of the classes are as follows:

Unit class A targets retail investors in Denmark. Units in this class are listed and are subject to the dual pricing system.

Unit class B targets and is reserved for foreign retail investors. Units in this class are not listed and are subject to the modified single pricing system unless otherwise stated under the individual funds.

Unit class I targets and is reserved for institutional investors. Units in this class are not listed and are subject to the dual pricing system unless otherwise stated under the individual funds.

Unit class W is reserved for collective investment schemes and investors with individual portfolio management agreements. Units in this class are not listed and are subject to the dual pricing system unless otherwise stated under the individual funds.

The pricing systems are described in further detail in item 12 of this prospectus.

The unit classes may be denominated in different currencies. The unit classes are income unit classes or accumulation unit classes. Some unit classes also engage in currency hedging. The characteristics of the unit classes in these respects form part of the names of the unit classes by way of abbreviations as set out in the table below.

As regards unit class A however, if “Akk” does not form part of the name of the unit class, the unit class is an income unit class and the name of the unit class does not indicate whether it engages in currency hedging or not. This information appears from the descriptions of the individual unit classes with regard to unit class A in items 5 and 6 of this prospectus. For instance, the unit class Danish Bonds B DKK d is an income unit class. The unit class Emerging Market Bonds B EUR Acc h is an accumulation unit class and engages in currency hedging.

Unit classes ending with an “h” engage in currency hedging and at least 80% of the assets of the unit class is hedged to DKK or EUR. Unless otherwise stated in this prospectus, the unit class will be exposed to the currencies that form part of the underlying fund's portfolio.

	Class A	Class B	Class I	Class W
Accumulation	Akk	Acc	Acc	Acc
Income	-	d	d	d
Currency hedging	-	h	h	h

4.2. Secondary names of funds

Many of the funds of the Investment Fund have English secondary names which are used in the English and German prospectuses. Below is a list of the secondary names of the funds:

Name (in alphabetical order)	Secondary name
Fjernøsten Akkumulerende KL	Far East Equities Acc KL
Globale EM-aktier Akkumulerende KL	Global EM Equities Acc KL
HøjrenteLande LC Akkumulerende KL	Emerging Market Local Currency Bonds Acc KL
HøjrenteLande Akkumulerende KL	Emerging Market Bonds Acc KL
HøjrenteLande KL	Emerging Market Bonds KL
Mellemlange Obligationer Akkumulerende KL	Danish Bonds Acc KL
Global Value Akkumulerende KL	Global Value Equities Acc KL

5. Funds taxed on a realisation basis

5.1. Bond funds

5.1.1. Korte Obligationer KL

The fund invests in price-stable bonds admitted to trading on a market in Denmark or on a market located in an EU/EEA country and the bonds must be denominated in DKK.

The fund is divided into 2 unit classes.

	Established	ISIN
Korte Obligationer A DKK	22 May 1996	DK0015916225
Korte Obligationer W DKK d	13 Jun 2017	DK0060814796

Korte Obligationer KL changed its name to Korte Obligationer A DKK, and Korte Obligationer W DKK d was established in connection with a split on 13 June 2017.

The typical investor

The typical investor has an investment horizon of at least 2 years and wishes to spread risk across many different Danish bonds. Furthermore the typical investor is looking for a highly stable return and annual distribution of dividends. The typical investor uses the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. Investors are expected to know that the risk factors mentioned in 7 may lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a two-year period. The fund's benchmark is Nordea Constant Maturity 2 Year Government Bond Index. Information about the challenges of selecting a benchmark for Danish bond funds is available under "3. Important issues" above.

	2019	2020	2021	2022	2023
Return (%)					
Korte Obligationer A DKK	0.57	1.24	(0.66)	(6.47)	5.31
Korte Obligationer W DKK d	0.61	1.25	(0.60)	(6.46)	5.38
<i>Benchmark</i>	<i>(0.49)</i>	<i>(0.65)</i>	<i>(0.64)</i>	<i>(4.92)</i>	<i>(3.35)</i>
Assets (DKK 1,000)					
Korte Obligationer A DKK	917,218	558,899	529,577	377,244	642,670
Korte Obligationer W DKK d	748,007	223,134	317,136	1,275,843	1,443,571
Korte Obligationer KL, total	1,665,225	782,033	846,713	1,653,087	2,086,239

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

Risk factors

The most significant risks for this fund are country risk, credit risk and interest rate risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

To maintain the risk profile the Board of Directors has determined limits as regards the fund's effective duration. The fund's effective duration may vary from 0 to 3 years. Moreover the above limitations will apply in relation to the type of bond.

Investments may be made in all types of bonds that meet the above criteria, subject to the following limitations.

Type of bond	Maximum position (%)
Government bonds/government guaranteed bonds ¹	100 ²
Mortgage bonds/bonds issued by shipping finance institutions/municipal bonds	100 ²
Corporate bonds ³	10

¹ Maximum position in non-investment grade government bonds: 0%.

² Subject to compliance with the risk spreading rules of the Danish Investment Associations, etc. Act.

³ Maximum position in non-investment grade corporate bonds: 5%.

Read more about measures to maintain risk in 7.2.

Dividends

The minimum payout of the fund is interest income less administrative costs.

Other fund data	Class A	Class W

Denomination	100	100
Notification of marketing in	Denmark	Denmark

5.1.2. Fonde KL

The fund invests in bonds admitted to trading on a market in Denmark or on a market located in an EU/EEA country and the bonds must be denominated in DKK. The fund seeks to achieve a high running yield in preference to price increases.

The fund is not divided into unit classes.

	Established	ISIN
Fonde KL	21 Apr 2004	DK0016271042

The typical investor

The typical investor has an investment horizon of at least 3 years and is looking for a stable return and high dividends on investments in Danish bonds. The fund targets mainly foundations, UCITS and trusts and is suited if the investor can use the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. Investors are expected to know that the risk factors mentioned in 7 may lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to achieve a high running yield in preference to price increases. The fund does not have a benchmark.

	2019	2020	2021	2022	2023
Return (%)					
Fonde KL	0.09	0.94	(1.58)	(11.46)	6.13

Assets (DKK 1,000)					
Fonde KL	544,041	524,566	433,527	328,027	316,826

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

Risk factors

The most significant risks for this fund are country risk, credit risk and interest rate risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's effective duration may vary from 0 to 6 years. Moreover the above limitations will apply in relation to the type of bond.

Investments may be made in all types of bonds in DKK in accordance with the Danish Investment Associations, etc. Act subject to the following limitations. In addition the investments must comply with the executive order on investments of non-commercial foundations issued by the Danish Department of Civil Affairs.

Type of bond	Maximum position (%)
Issued in EU/EEA countries other than Denmark ¹	20
Corporate bonds ²	10
Convertible bonds	0
Premium bonds	0

¹ Maximum position in non-investment grade government bonds: 0%.

² Maximum position in non-investment grade corporate bonds: 0%.

Read more about measures to maintain risk in 7.2.

Dividends

The minimum payout of the fund is interest income less administrative costs.

5.1.3. Mellemlange Obligationer KL

The fund invests in bonds admitted to trading on a market in Denmark or on a market located in an EU/EEA country. The bonds must be denominated in DKK.

The fund is divided into 2 unit classes.

	Established	ISIN
Mellemlange Obligationer A DKK	7 Jan 2015	DK0060585073
Mellemlange Obligationer W DKK d	13 Jun 2017	DK0060814879

The typical investor

The typical investor has an investment horizon of at least 3 years and wishes to obtain a stable return on investments in Danish bonds. The typical investor uses the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. Investors are expected to know that the risk factors mentioned in 7 may lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a three-year period.

The fund's benchmark is 50% Nordea Constant Maturity 3 Year Government Bond Index and 50% Nordea Constant Maturity 5 Year Government Bond Index. Consequently the benchmark duration is close to 4 years. Information about the challenges of selecting a benchmark for Danish bond funds is available under "3. Important issues" above.

	2019	2020	2021	2022	2023
Return (%)					
Mellemlange Obligationer A DKK	1.53	1.75	(2.54)	(10.35)	6.21
Mellemlange Obligationer W DKK d	1.79	1.93	(2.38)	(10.23)	6.38

5.1.4. Korte Obligationer PM

The fund invests in price-stable Danish mortgage bonds, government bonds and government guaranteed bonds from an EU/EEA country.

The fund is reserved for institutional investors, collective investment schemes and investors with individual portfolio management agreements. The placement of the fund's capital must comply with the limits stipulated in the Danish executive order from time to time on the management of subsidised housing.

The fund is not divided into unit classes.

	Established	ISIN
Korte Obligationer PM	18 Dec 2023	DK0062616041

On 24 August 2023 the Board of Directors of the Investment Fund decided to establish Korte Obligationer PM.

Subscription

Units in Investeringsforeningen Sydinvest, Korte Obligationer PM can be traded as from 18 December 2023 in compliance with item 12.1 of this prospectus "Dual pricing system".

The typical investor

The typical investor is an institutional investor, a collective investment scheme or an investor with an individual portfolio management agreement who has an investment horizon of at least 2 years and who wishes to obtain a stable return on investments in Danish mortgage bonds, government bonds and government guaranteed bonds from an EU/EEA country.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a two-year period. The fund's benchmark is Nordea Constant Maturity 2 Year Government Bond Index. Information about the challenges of selecting a benchmark for Danish bond funds is available under "3. Important issues" above.

¹ The first return and the benchmark return for 2023 cover the period from 18 Dec 2023 to 31 Dec 2023.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

Risk factors

The most significant risks for this fund are country risk, credit risk and interest rate risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's effective duration may vary from 0 to 3 years. Moreover the above limitations will apply in relation to the type of bond.

Investments may be made in all types of bonds in DKK in accordance with the Danish Investment Associations, etc. Act subject to the following limitations. The fund's capital must be placed in compliance with the limits stipulated in the Danish executive order from time to time on the management of subsidised housing.

Type of bond	Maximum position (%)
Government and government guaranteed bonds from an EU/EEA country ¹	100 ²
Danish mortgage bonds	100 ²

¹ Maximum position in non-investment grade government bonds: 0%.

² Subject to compliance with the risk spreading rules of the Danish Investment Associations, etc. Act.

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

5.1.5. Mellemlange Obligationer PM

The fund invests in Danish mortgage bonds, government bonds and government guaranteed bonds from an EU/EEA country.

The fund is reserved for institutional investors, collective investment schemes and investors with individual portfolio management agreements. The placement of the fund's capital must comply with the limits stipulated in the Danish executive order from time to time on the management of subsidised housing.

The fund is not divided into unit classes.

	Established	ISIN
Mellemlange Obligationer PM	18 Dec 2023	DK006261614

On 24 August 2023 the Board of Directors of the Investment Fund decided to establish Mellemlange Obligationer PM.

Subscription

Units in Investeringsforeningen Sydinvest, Mellemlange Obligationer PM can be traded as from 18 December 2023 in compliance with item 12.1 of this prospectus "Dual pricing system".

The typical investor

The typical investor is an institutional investor, a collective investment scheme or an investor with an individual portfolio management agreement who has an investment horizon of at least 3 years and who wishes to obtain a stable return on investments in Danish mortgage bonds, government bonds and government-guaranteed bonds from an EU/EEA country.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a two-year period. The fund's benchmark is 50% Nordea Constant Maturity 3 Year Government Bond Index and 50% Nordea Constant Maturity 5 Year Government Bond Index. Information about the challenges of selecting a benchmark for Danish bond funds is available under "3. Important issues" above.

	2019	2020	2021	2022	2023
Return (%)					
Mellemlange Obligationer PM ¹	-	-	-	-	0.33
Benchmark ¹	0.73	0.08	(1.24)	(9.55)	0.28
Assets (DKK 1,000)					
Mellemlange Obligationer PM	-	-	-	-	339,450

¹ The first return and the benchmark return for 2023 cover the period from 18 Dec 2023 to 31 Dec 2023.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

Risk factors

The most significant risks for this fund are country risk, credit risk and interest rate risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's effective duration may vary from 0 to 6 years. Moreover the above limitations will apply in relation to the type of bond.

Investments may be made in all types of bonds in DKK in accordance with the Danish Investment Associations, etc. Act subject to the following limitations. The fund's capital must be placed in compliance with the limits stipulated in the Danish executive order from time to time on the management of subsidised housing.

Type of bond	Maximum position (%)

5.1.6. HøjrenteLande KL (Emerging Market Bonds KL)

The fund invests in bonds denominated in foreign currency from international bond markets offering a potential excess return compared with traditional bond markets.

Investments may also be made in similar depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy.

The fund's investments are denominated in foreign currency and may be hedged to DKK or EUR.

The fund is divided into 2 unit classes.

	Established	ISIN
HøjrenteLande A DKK	14 Feb 2003	DK0016231921
HøjrenteLande W DKK d	13 Jun 2017	DK0060815256

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high return and high annual dividends. Investors are expected to know that the fund may experience significant price fluctuations, see "Risk factors".

The objective is to generate a return that is equal to or higher than the fund's benchmark measured over a rolling three-year period through the allocation of a mixed portfolio of government bonds in hard and local currencies from countries within emerging markets.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The investment profile combines ESG analysis with fundamental value analysis of the investment opportunities. ESG covers the countries' level and development within environmental, social and governance issues. The fund actively selects and deselects issuers on the basis of eg ESG requirements and the greatest expectations regarding return potential. Consequently the fund differs significantly at times from the composition of its benchmark.

The investment strategy integrates ESG through a screening and analysis process for issuers in emerging market countries as well as state-owned and state-guaranteed companies of these countries. The fund assesses the ESG level and development of all issuers on a comprehensive basis. Where the fund assesses that the ESG criteria have not been met this typically leads to exclusion. At the same time alternative issuers that can best substitute returns and risk properties are assessed so that the portfolio as a whole meets the investment objective.

The screening of countries and quasi-sovereign corporate bonds leads to exclusion according to the following principles:

1. Countries comprised by international sanctions, eg actual prohibitions, sanctions against the machinery of government and weapons export bans.
2. Countries for which the outcome of the manager's internal, quantitative and qualitative ESG process is below the applicable minimum criterion for responsible investment from time to time.
3. Quasi-sovereigns with confirmed serious violations of international norms defined by the 10 principles of the UN Global Compact.
4. Quasi-sovereigns whose business area includes activities where more than 5% of their turnover derives from fossil fuels (extraction, production, refining, distribution and sale), weapons, tobacco (production and distribution), alcohol, gambling and adult entertainment.

Given the above-mentioned limitations the fund may invest in debt instruments for the financing of specific and well-documented sustainable activities, eg green bonds. It is a condition for such investments that the instruments are issued by governments, state-owned or state-guaranteed companies in emerging markets, that the sustainable activity can be defined unambiguously and that it can be verified and approved as sustainable by an independent party.

In addition to the above the fund may invest in bond equivalent securities, for instance so-called depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy.

The fund's investments are denominated in foreign currency and may be hedged to the currency of the unit class.

Sovereign bond screening and exclusion (ESG process)

The fund has concluded a consultancy agreement concerning ESG screening with its investment adviser, Sydbank.

The screening applies to all sovereign and quasi-sovereign bonds in emerging markets. Individual quasi-sovereign bonds may be excluded on the basis of company-specific issues.

Screening process

Sydbank analyses ESG factors with a view to assessing the current level and long-term development potential in countries and the results are integrated in the composition of the final portfolio. The objective of the screening of countries' ESG qualities is furthermore to determine the minimum criteria that must be met for a country to be included in the investment universe.

If a country does not meet one or several of the criteria in the analysis process, it will usually be excluded unless Sydbank recommends that it is included due to other qualitative factors, eg cases of current conditions which historical data cannot take into account.

The final exclusion list ("red" countries) is established according to the following principles:

- The "red" countries are excluded because one or several exclusion criteria are in play. Depending on the circumstances the list may also include quasi-sovereign bonds from "yellow" and "green" countries.

- Subject to certain conditions the “yellow” countries may be included in the investment universe but they must be monitored on an ongoing basis to ensure that they do not follow a clearly negative ESG trend.
- All the “green” countries are included in the investment universe.

The above categorisation combines quantitative and qualitative analysis where Sydbank makes a subjective and documented ESG assessment. Sovereign states develop gradually in terms of ESG issues and therefore Sydbank may compensate temporarily for a country’s poor score by assigning additional points to the model following a qualitative assessment if Sydbank believes that the score does not adequately reflect factual positive conditions. Conversely a country may be removed from the investment universe if a qualitative assessment finds that the score does not adequately reflect factual negative conditions.

Establishment of the final exclusion list

The investment management company receives on a quarterly basis the proposed exclusion list from Sydbank along with a report on changes and developments in the ESG factors that are deemed relevant in connection with the investment universe. Moreover reporting may take place on an ad hoc basis at the request of Sydbank if required due to special circumstances.

The investment management company may decide independently to add countries to or remove countries from the final list. Following approval the exclusion list will be implemented in the fund’s investment guidelines.

The fund’s benchmark is 50% JP Morgan EMBI Global Diversified hedged to DKK and 50% JP Morgan GBI-EM Global Diversified unhedged to DKK.

Concordance between fund characteristics and benchmark characteristics

The fund’s benchmark is a broad index for emerging markets. Consequently the fund’s characteristics and the benchmark’s characteristics are not congruent.

Risk factors

The most significant risks for this fund are foreign exchange risk, credit risk, interest rate risk, liquidity risk and emerging market risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund’s risk profile

In addition to the above limitations in relation to type of bond the following limitations will apply to the fund

- The fund's duration may vary a maximum of +/- 3 years from the benchmark duration.
- The fund's maximum position in non-investment grade bonds is 80% of assets.
- The average portfolio rating must always be B- (Standard & Poor's) or higher.
- A maximum of 20% of assets may be invested in a single currency, apart from EUR. The fund pursues an active currency policy. Consequently the fund may use derivatives to obtain the currency exposure required.

Investments may be made in bonds that meet the above criteria, subject to the following limitations/additions.

Type of bond	Maximum position (%)
Government bonds/government guaranteed bonds ¹	100
Quasi-sovereign corporate bonds	30

¹ Including bank issues where the primary underlying risk is related to government bonds if the issuing bank has been approved by the Board of Directors of the Investment Fund.

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

5.1.7. Virksomhedsobligationer IG KL

The fund invests globally in corporate bonds that have a rating corresponding to investment grade. Consequently investments are made in bonds that at the time of investment have a rating of BBB- or higher by Standard & Poor's or a similar rating by another recognised credit rating agency. Mortgage bonds and government bonds may at times form part of the portfolio. No limits have been laid down as regards in which countries, regions and sectors the fund may make investments.

The fund is divided into 2 unit classes.

	Established	ISIN
Virksomhedsobligationer IG A DKK	5 Mar 2012	DK0060409266
Virksomhedsobligationer IG W DKK d h	5 Oct 2016	DK0060751501

The typical investor

The typical investor has an investment horizon of at least 3 years and is looking for a high degree of diversification across highly-rated corporate bonds to obtain a positive return on the investment. The typical investor uses the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. The fund Virksomhedsobligationer IG KL is expected to generate a negative return in the short term when applying the most recent common return expectations published by the Danish Council for Return Expectations and the fund's costs. Investors are expected to know that the fund may experience significant price fluctuations, see "Risk factors".

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a three-year period.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process.

The fund's benchmark is ICE BofA Euro Corporate Index hedged to DKK.

5.1.8. Virksomhedsobligationer IG Screened KL

The fund invests globally in corporate bonds that have a rating corresponding to investment grade. Consequently investments are made in bonds that at the time of investment have a rating of BBB- or higher by Standard & Poor's or a similar rating by another recognised credit rating agency. Mortgage bonds and government bonds may at times form part of the portfolio. No limits have been laid down as regards in which countries, regions and sectors the fund may make investments.

The fund screens companies' activities in selected business areas. These are tobacco, alcohol, gambling, adult entertainment and armaments & firearms as well as fossil fuels (extraction, production, refining, distribution and sale). Issuers that derive more than 5% of their turnover from activities within these business areas will be screened out of the

investment universe. The same applies to suppliers of equipment and services within fossil fuels where the turnover is 50%. The fund cannot invest in issuers that do not meet the screening criteria.

The fund is divided into 1 unit class.

	Established	ISIN
Virksomhedsobligationer IG Screened W DKK d h	5 Jul 2017	DK0060853422

The typical investor

The typical investor has an investment horizon of at least 3 years and is looking to invest in a fund with an ethical profile with a high degree of diversification across highly-rated corporate bonds to obtain a positive return on the investment. The typical investor uses the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. The fund Virksomhedsobligationer IG Screened KL is expected to generate a negative return in the short term when applying the most recent common return expectations published by the Danish Council for Return Expectations and the fund's costs. The typical investor also wants investments to be ethically screened. Investors are expected to know that risk factors, see "Risk factors", may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a three-year period.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

Ethics: The companies in the fund's investment universe are screened within 6 business areas. The table indicates the maximum turnover allowed within the various business areas.

Risk factors

The most significant risks for this fund are credit risk, interest rate risk and liquidity risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

- Unlisted US corporate bonds are of highly varying quality and therefore the fund invests only in bonds with:
 - an outstanding volume representing at least USD 100m or its equivalent in another currency
 - a credit rating that is higher than CC by Standard & Poor's or Ca by Moody's at the time of acquisition
 - at least 2 of the internationally leading brokerage firms acting as daily market makers.
- The majority of the fund's investments will be denominated in EUR or hedged to DKK or EUR.
- The aim is to have satisfactory diversification geographically as well as across industries and issuers.
- The average portfolio rating must always be B or higher.
- Currency positions in DKK and EUR must represent at least 90% of assets. Other currency positions may not exceed 10% of assets.

The fund may invest in bonds within all industries. No limits as regards the allocation of assets by industry have been determined but the fund aims to have satisfactory diversification across many industries. Investments may be made in bonds that meet the above criteria, subject to the following limitations.

Type of bond	Maximum position (%)
Corporate bonds	100 ¹
Government and mortgage bonds	50 ¹

¹ Subject to compliance with the risk spreading rules of the Danish Investment Associations, etc. Act.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of ICE BofA Euro High Yield Index, reference is made to ICE. The method to calculate the benchmark is available at this address:

<https://indices.theice.com/home#>

The fund may invest in bonds within all industries. No limits as regards the allocation of assets by industry have been determined but the fund aims to have satisfactory diversification across many industries. Investments may be made in bonds that meet the above criteria, subject to the following limitations.

Risk factors

The most significant risks for this fund are credit risk, interest rate risk and liquidity risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The different types of restrictions are summarised in the table below. Under the law, the fund must spread its investments across several securities.

- Unlisted US corporate bonds are of highly varying quality and therefore the fund invests only in bonds with:
 - an outstanding volume representing at least USD 100m or its equivalent in another currency
 - a credit rating that is higher than CC by Standard & Poor's or Ca by Moody's at the time of acquisition
 - at least 2 of the internationally leading brokerage firms acting as daily market makers.

- The majority of the fund's investments will be denominated in EUR or hedged to DKK or EUR.
- The aim is to have satisfactory diversification geographically as well as across industries and issuers.
- The average portfolio rating must always be B or higher.
- Currency positions in DKK and EUR must represent at least 90% of assets. Other currency positions may not exceed 10% of assets.

Tracking error: Risks are continuously managed on the basis of the fund's past price movements relative to overall market developments measured by the fund's benchmark.

Ethics: The companies in the fund's investment universe are screened within 6 business areas. The table indicates the maximum turnover allowed within the various business areas.

Business area	Maximum turnover
Tobacco (production)	5%
Tobacco (distribution)	5%
Alcohol	5%
Gambling	5%
Adult entertainment	5%
Armaments & firearms	5%
Fossil fuels (extraction, production, refining, distribution and sale)	5%
Fossil fuels (equipment and service suppliers)	50%

5.1.11. Formue Obligationer KL

The fund invests globally in bonds which are expected to make a positive contribution to sustainable development.

The fund can achieve its exposure to global bonds via investments in units in other investment undertakings. The fund may invest up to 100% of its assets in units in other UCITS, funds or investment undertakings.

Investments may also be made in similar depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy.

The fund is divided into 2 unit classes.

	Established	ISIN
Formue Obligationer A DKK ¹	16 Aug 2022	DK0061806981
Formue Obligationer W DKK d ¹	16 Aug 2022	DK0061807013

¹ The first financial reporting period runs from 16 Aug 2022 to 31 Dec 2022.

The typical investor

The typical investor has an investment horizon of at least 3 years and wishes to obtain a stable return on bonds which are expected to make a positive contribution to sustainable development. The typical investor uses the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. Investors are expected to know that the risk factors mentioned in 7 may lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is through international diversification to obtain a return that equals or outperforms the return of the benchmark of the unit class over a three-year period.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's benchmark is composed as follows:

Sub-index	Weight (%)
Nordea CM 3Y Government Bond Index	60.0
ICE BofA Euro Corporate Index hedged to DKK	20.0
ICE BofA Euro HY Index hedged to DKK	10.0
JP Morgan EM Bond Index Global Diversified hedged to DKK	10.0
Total	100.0

	2019	2020	2021	2022	2023
Return (%) ¹					
Formue Obligationer A DKK	-	-	-	(4.92)	7.29
Formue Obligationer W DKK d	-	-	-	(4.81)	7.62
<i>Benchmark</i> ²	<i>4.62</i>	<i>1.76</i>	<i>(0.85)</i>	<i>(5.26)</i>	<i>6.79</i>
Assets (DKK 1,000)					
Formue Obligationer A DKK	-	-	-	92,648	116,963
Formue Obligationer W DKK d	-	-	-	95,195	93,508
Formue Obligationer KL, total	-	-	-	187,843	210,470

¹ The first return covers the period from 16 Aug 2022 to 31 Dec 2022.

² Up to and including 31 May 2024 the fund's benchmark consisted of 20% Nordea CM 3Y Gov, 20% Nordea CM 5Y Gov, 45% ICE BofA Euro Corp Index, 7.5% ICE BofA Euro HY Index and 7.5% JP Morgan EMB Index GD.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of Nordea CM 3Y Government Bond Index and Nordea CM 5 Y Government Bond Index, reference is made to Nordea. The method to calculate the benchmark is available at this address:

<https://corporate.nordea.com/api/research/attachment/75001>

For a more detailed description of ICE BofA Euro Corporate Index and ICE BofA HY Index, reference is made to ICE. The method to calculate the benchmark is available at this address:

Risk factors

The most significant risks for this fund are credit risk, interest rate risk, liquidity risk and emerging market risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In addition to the above limitations in relation to type of bond the following limitations will apply to the fund

- The portfolio's effective duration may not deviate from the benchmark's effective duration by more than 2 years.
- The fund's maximum position in non-investment grade bonds is 50% of assets.
- The average portfolio rating must always be B- (Standard & Poor's) or higher.
- Currency positions in DKK and EUR must represent at least 90% of assets. Other currency positions may not exceed 10% of assets.
- The fund may use derivatives to obtain the currency exposure required. The fund engages in currency hedging.

Investments may be made in bonds that meet the above criteria, subject to the following limitations/additions.

Type of bond	Maximum position (%)
Government bonds/government guaranteed bonds	100 ¹
Mortgage bonds/bonds issued by shipping finance institutions/municipal bonds	100 ¹
Corporate bonds	75 ¹

¹ Subject to compliance with the risk spreading rules of the Danish Investment Associations, etc. Act.

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

5.2. Equity funds

5.2.1. Global Value KL

The fund invests globally in shares. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The fund may invest in Chinese A shares through China Connect.

The fund is divided into 2 unit classes.

	Established	ISIN
Global Value A DKK	16 Nov 1987	DK0010101740
Global Value W DKK d	18 Apr 2016	DK0060726909

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see “Risk factors” below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund’s benchmark over a four-year period while observing the fund’s risk limits.

The fund invests globally in shares. Investments are diversified across different countries and industries. The fund’s largest investments are in USA and Europe. The fund pursues a value strategy. When investing according to a value strategy, we select companies that are inexpensively priced based on a number of financial ratios relative to the share price of the companies.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund’s environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The fund’s benchmark is MSCI World Value Index, including net dividends, unhedged to DKK.

	2019	2020	2021	2022	2023
Return (%)					
Global Value A DKK	23.43	(8.74)	30.15	(7.90)	11.86

<i>Benchmark</i> ¹	<i>29.10</i>	<i>6.24</i>	<i>27.44</i>	<i>(13.03)</i>	<i>18.35</i>
Assets (DKK 1,000)					
Global Value A DKK	301,468	221,190	281,985	226,959	235,360
Global Value W DKK d	888,643	231,772	253,443	243,258	213,214
Global Value KL, total	1,189,811	452,962	535,428	470,217	448,574

¹ Up to and including 31 May 2024 the fund's benchmark was MSCI All Country World Index, including net dividends, unhedged to DKK.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of MSCI World Value Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

In the attempt to fulfil the objective, the fund's investments will typically deviate from benchmark. Therefore the fund may have underweight and overweight positions in companies, sectors and countries compared to its benchmark.

In recent years region and sector level returns have been affected to varying degrees by cyclical and structural developments. Currently there are no expectations of large differences in the future returns of individual regions and sectors.

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error). Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

5.2.2. Globale Aktier PM Screened KL

The fund invests globally in shares. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The fund may invest in Chinese A shares through China Connect.

The fund is divided into 2 unit classes.

	Established	ISIN
Globale Aktier PM Screened W DKK d	1 Feb 2016	DK0060681468

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. The typical investor also wants investments to be ethically screened. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a four-year period while observing the fund's risk limits.

The fund invests globally in shares. Investments are diversified across different countries and industries. The fund's largest investments are in USA and Europe.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

Ethics: The companies in the fund's investment universe are screened within 6 business areas. The table indicates the maximum turnover allowed within the various business areas.

Business area	Maximum turnover
Tobacco (production)	5%
Tobacco (distribution)	5%
Alcohol	5%
Gambling	5%
Adult entertainment	5%
Armaments & firearms	5%
Fossil fuels (extraction, production, refining, distribution and sale)	5%
Fossil fuels (equipment and service suppliers)	50%

The fund cannot invest in companies that do not meet the screening criteria.

As from 1 July 2024 the fund's benchmark is MSCI ACWI Screened Index, including net dividends, unhedged to DKK. (Up to and including 30 June 2024 MSCI All Country World Index, including net dividends, unhedged to DKK.)

	2019	2020	2021	2022	2023

5.2.3. Kvalitetsaktier KL

The fund invests globally in shares which are expected to make a positive contribution to sustainable development. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The fund may invest in Chinese A shares through China Connect.

The fund is divided into 2 unit classes.

	Established	ISIN
Kvalitetsaktier A DKK	29 Mar 2021 ¹	DK0061533643
Kvalitetsaktier W DKK d	29 Mar 2021 ¹	DK0061533726

¹ The first financial reporting period runs from 29 Mar 2021 to 31 Dec 2021.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. The typical investor also wants to invest in companies which make a positive contribution to sustainable development. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a four-year period while observing the fund's risk limits.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund invests globally in shares. Investments are diversified across different countries and industries. The fund's largest investments are in USA and Europe. The fund invests in shares in companies whose overall responsibility score is very high and CO₂ emission score is very low.

The fund screens companies' activities in selected business areas. These are extraction and refinement of fossil fuels, electricity produced from fossil fuels or uranium, conventional weapons, alcohol, gambling, adult entertainment and tobacco. Companies that derive more than 5% of their turnover from activities within these business areas will be screened out of the investment universe. The fund cannot invest in companies that do not meet the screening criteria.

The fund's benchmark is MSCI World Index, including net dividends, unhedged to DKK.

	2019	2020	2021	2022	2023
Return (%)					
Kvalitetsaktier A DKK ¹	-	-	19.26	(15.19)	16.89

Kvalitetsaktier KL, total	-	-	2,450,798	1,261,317	1,737,064

¹ The first return covers the period from 29 Mar 2021 to 31 Dec 2021.

² Up to and including 31 May 2024 the fund's benchmark was MSCI All Country World Index, including net dividends, unhedged to DKK.

In the attempt to fulfil the objective, the fund's investments will typically deviate from benchmark.

In recent years region and sector level returns have been affected to varying degrees by cyclical and structural developments. Currently there are no expectations of large differences in the future returns of individual regions and sectors.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad global index. Consequently the fund's characteristics and the benchmark's characteristics are not congruent.

Method to calculate benchmark

For a more detailed description of MSCI World Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error). Moreover screening is carried out within the above-mentioned business areas. No limits have been laid down as regards in which countries, regions and sectors the fund may make investments.

Sustainability: The companies in the fund's investment universe are screened within four business areas. The table indicates the maximum turnover allowed within the various business areas.

Business area	Maximum turnover
Tobacco (production and distribution)	5%
Alcohol	5%
Gambling	5%
Adult entertainment	5%
Conventional weapons (production and distribution)	5%
Fossil fuels (extraction)	5%
Electricity produced from fossil fuels	5%

Companies exempted from the cap on turnover as regards fossil fuels meet the following criteria:

- At least 75% of the company's investments in the energy sector for the past three years have been in renewable energy
- Turnover from renewable energy represents at least 50% of the company's total turnover calculated as an average of the most recent financial year, the most recent two financial years or the most recent three financial years

- Less than 0.1% of the company's turnover derives from tar sands, shale oil or shale gas or other fracking activities and/or mining of oil shale.

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

Other unit class data	Class A	Class W

5.2.4. Megatrends KL

The fund invests globally in shares. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The fund may invest in Chinese A shares through China Connect.

The fund is divided into 2 unit classes.

	Established	ISIN
Megatrends A DKK	14 Mar 2023	DK0062382628
Megatrends W DKK d	14 Mar 2023	DK0062382701

The first financial reporting period of the unit classes runs from 15 May 2023 to 31 Dec 2023.

The fund will invest in companies within various themes which may be derived from different megatrends related to eg:

- Demographic change
- Climate change
- Consumer of the future
- Transport of the future
- Technological innovation

The list is not exhaustive as there are many more possibilities and in addition the themes may change over time. Within each megatrend there is a number of themes in which the funds can choose to invest.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms returns in global share markets over a four-year period while observing the fund's risk limits.

The fund will at times differ significantly from benchmark. The fund will invest in selected megatrends, which involves overweighting megatrend companies and underweighting companies that are not part of the selected megatrends. Consequently the fund's ex-ante and ex-post tracking error relative to benchmark may at times be very high. Similarly the fund's return will at times differ significantly from benchmark return.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The fund's benchmark is MSCI All Country World Index, including net dividends, unhedged to DKK.

	2019	2020	2021	2022	2023

5.2.5. Europa Value KL

The fund invests in shares in companies which are either domiciled in, admitted to trading on a market in or whose main activity is in Europe.

The fund is divided into 2 unit classes.

	Established	ISIN
Europa Value A DKK	1 May 1986	DK0015323406
Europa Value W DKK d	13 Jun 2017	DK0060815686

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, industries and companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a four-year period while observing stipulated risk limits.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The fund invests in European shares. Investments are diversified across different industries and companies. The fund pursues a value strategy. When investing according to a value strategy, we select companies that are inexpensively priced based on a number of financial ratios relative to the share price of the companies. The fund's benchmark is MSCI Europe Value Index, including net dividends, unhedged to DKK.

	2019	2020	2021	2022	2023
Return (%)					
Europa Value A DKK	21.65	(9.27)	24.00	(13.27)	18.55
Europa Value W DKK d	22.57	(8.78)	24.99	(12.78)	19.44
<i>Benchmark¹</i>	<i>26.22</i>	<i>(3.70)</i>	<i>25.03</i>	<i>(9.51)</i>	<i>16.11</i>

Europa Value W DKK d	349,785	72,163	231,851	64,412	56,248
Europa Value KL, total	701,828	302,798	576,464	326,447	329,542

¹ Up to and including 31 May 2024 the fund's benchmark was MSCI Europe Index, including net dividends, unhedged to DKK.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not congruent.

Method to calculate benchmark

For a more detailed description of MSCI Europe Value Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

In the attempt to fulfil the objective, the fund's investments will typically deviate from benchmark. In recent years region and sector level returns have been affected to varying degrees by cyclical and structural developments. Currently there are no expectations of large differences in the future returns of individual regions and sectors.

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error).

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

5.2.6. Indeks Tyskland KL

The fund invests in shares in companies forming part of the fund's index. The objective of the fund's composition of investments is to copy the index while taking into account transaction costs.

The fund consists of one unit class.

	Established	ISIN
Indeks Tyskland A DKK	25 Apr 2006	DK0060033116

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across industries and companies as a good long-term investment opportunity to supplement other investments. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals the return of the fund's benchmark adjusted for costs. Consequently the fund is passively managed. In the attempt to fulfil the objective, the fund's investments follow the benchmark. The fund may invest up to 20% of its assets in one company, subject however to the approval by the Danish FSA of the fund's benchmark.

The fund falls within Article 6 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

A sustainability risk is defined as an environmental, social or governance event or circumstance which, if it occurs, could have an actual or potential adverse impact on the value of an investment.

Sustainability risks form part of the fund's investment decisions in conjunction with traditional risk measures and financial ratios which clarify the valuation of the assets comprised by the fund's investments.

Greenhouse gas emissions represent a large sustainability risk which may have a potentially large negative impact on the value of investments. Other types of sustainability risks which may impact the value of the fund's investments include: Violation of human rights or workers' rights, environmental pollution, strain on biodiversity, waste management in industrial production as well as product safety and data security.

Eliminating companies and sectors that are particularly sensitive to the examples of sustainability risks mentioned above may reduce the fund's sustainability risk. However restricting the investment universe may result in a rise in volatility and potential underperformance relative to the fund's benchmark.

The underlying investments of this financial product do not take into account the EU criteria as regards environmentally sustainable activities.

The fund's benchmark is MSCI Germany Index unhedged to DKK.

	2019	2020	2021	2022	2023
Return (%)					
Indeks Tyskland A DKK	26.28	4.21	21.38	(22.23)	14.16
<i>Benchmark ¹⁾</i>	<i>25.14</i>	<i>4.31</i>	<i>13.95</i>	<i>(16.90)</i>	<i>19.31</i>
Assets (DKK 1,000)					
Indeks Tyskland KL	447,142	443,025	413,227	269,547	265,926

1 Up to and including 31 May 2024 the fund's benchmark was CDAX Performance Index. The benchmark was changed when the fund went from being actively managed to passively managed.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of MSCI Germany Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

Risk factors

The most significant risks for this fund are country risk, sector risk and concentration risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error). In order to maintain the fund's risk profile relative to the fund's benchmark, restrictions have been imposed. The different types of restrictions are summarised in the table below. The fund may be subject to restrictions that do not appear from the table. Ex-ante tracking error is a statistical model-based measurement of the expected maximum deviation of fund return at a probability of 68% from benchmark return within 12 months.

	Limitations (%)
Ex-ante tracking error	Maximum 2.0
Investments outside benchmark	Maximum 10

The fund invests as a minimum 90% of its assets in shares included in MSCI Germany Index.

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

Other fund data	Class A

5.2.7. Fjernøsten KL

The fund invests in shares in companies which are either domiciled in, admitted to trading on a market in or whose main activity is in Asia excluding Japan. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The fund may invest in Chinese A shares through China Connect.

The fund is divided into 2 unit classes.

	Established	ISIN
Fjernøsten A DKK	13 May 1991	DK0010169549
Fjernøsten W DKK d	13 Jun 2017	DK0060815769

The typical investor

The typical investor has an investment horizon of at least 5 years and is looking for a high degree of diversification across Far Eastern companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a five-year period while observing stipulated risk limits.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The fund's benchmark is MSCI AC ASIA excluding Japan Index, including net dividends, unhedged to DKK.

	2019	2020	2021	2022	2023

5.2.8. USA Value KL

The fund invests in shares in companies which are either domiciled in, admitted to trading on a market in or whose main activity is in USA.

The fund is divided into 2 unit classes.

	Established	ISIN
USA Value A DKK	31 Oct 2000	DK0010270776
USA Value W DKK d	9 Dec 2016	DK0060774982

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking to diversify across sectors and companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a four-year period.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The fund invests in North American shares. Investments are diversified across different industries and companies. The fund pursues a value strategy. When investing according to a value strategy, we select companies that are inexpensively priced based on a number of financial ratios relative to the share price of the companies. The fund's benchmark is MSCI USA Value Index, including net dividends, unhedged to DKK.

5.2.10. Indeks Verden Screened KL

The fund invests globally in shares forming part of the fund's index. The objective of the fund's composition of investments is to copy the index while taking into account transaction costs. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs). The fund may invest in Chinese A shares through China Connect.

The fund has 1 unit class.

	Established	ISIN
Indeks Verden Screened W DKK d	18 Feb 2020 ¹	DK0061156759

¹ The first financial reporting period runs from 18 Feb 2020 to 31 Dec 2020.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. The typical investor also wants investments to be ethically screened. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals the return of the fund's benchmark adjusted for costs. Consequently the fund is passively managed. In the attempt to fulfil the objective, the fund's investments follow the benchmark.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership. As from 1 July 2024 the fund's benchmark is MSCI ACWI Screened Index, including net dividends, unhedged to DKK. (Up to and including 30 June 2024 Morningstar Global Target Market Exposure Responsible Index.)

	2019	2020	2021	2022	2023
Return (%)					
Indeks Verden Screened W DKK d ¹	-	2.06	26.91	(16.06)	22.15
<i>Benchmark</i> ²	<i>30.4</i>	<i>2.80</i>	<i>27.40</i>	<i>(16.55)</i>	<i>20.61</i>
Assets (DKK 1,000)					
Indeks Verden Screened W DKK d	-	621,520	434,541	312,938	350,761

¹ The first return covers the period from 18 Feb 2020 to 31 Dec 2020.

² Up to and including 30 Jun 2024 the fund's benchmark is Morningstar Global Target Market Exposure Responsible Index.

Method to calculate benchmark

Benchmark up to and including 30 June 2024:

For a more detailed description of Morningstar Global Target Market Exposure Responsible Index, reference is made to Morningstar. The method to calculate the benchmark is available at this address:

https://indexes.morningstar.com/resources/PDF/upload/Morningstar_Global_Target_Market_Exposure_Indexes_Final.pdf

Concordance between fund characteristics and benchmark characteristics

The benchmark has been selected on the basis of its environmental and social characteristics. The fund is an index fund and consequently there is congruity between the environmental and social characteristics of the fund and the benchmark.

Benchmark as from 1 July 2024:

For a more detailed description of MSCI ACWI ex Screened Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

Concordance between fund characteristics and benchmark characteristics

The benchmark has been selected on the basis of its global diversification and subsequently screened with regard to environmental and social characteristics. The fund is an index fund and consequently it cannot invest in companies that exceed these environmental and social criteria.

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error). The investment strategy is to minimise the ex-ante tracking error relative to benchmark while taking into account costs and ethical screening. Ex-ante tracking error is a statistical model-based measurement of the expected maximum deviation of fund return at a probability of 68% from benchmark return within 12 months.

	Limitations (%)
Ex-ante tracking error	Maximum 2.0
Investments outside benchmark	Maximum 10

Ethics: The companies in the fund's investment universe are screened within 6 business areas. The table indicates the maximum company turnover allowed within the various business areas.

Activity	Maximum turnover
----------	------------------

Tobacco (production)	5%
Tobacco (distribution)	5%
Alcohol	5%
Gambling	5%
Adult entertainment	5%
Armaments & firearms	5%
Fossil fuels (extraction, production, refining, distribution and sale)	5%
Fossil fuels (equipment and service suppliers)	50%

In addition companies that do not meet the requirements regarding good governance practices, see Appendix 1, as well as companies with a greenhouse gas intensity (tCO₂e per million USD revenue) or a greenhouse gas footprint (tCO₂e per million USD invested) of above 1,000 are screened out of the fund's investment universe.

No limits have been laid down as regards in which countries, regions and sectors the fund may make investments.

Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

Other unit class data	Class W
SE no	40984127
Risk category	4
Listed on	Unlisted
Issue and redemption pricing	Dual pricing

5.2.11. Indeks Morningstar Leaders KL

The fund invests globally in shares in companies which are part of the index Morningstar Global Markets Sustainability Leaders. The sole objective of the fund's composition of investments is to copy the index while taking into account transaction costs.

Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs). The fund may invest in Chinese A shares through China Connect.

The fund is not divided into unit classes.

	Established	ISIN
Indeks Morningstar Leaders KL	23 Aug 2018	DK0061111572

The typical investor

The typical investor has an investment horizon of at least 4 years and wishes to invest in a fund which addresses sustainable investments. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals the return of the fund's benchmark adjusted for costs. The fund's benchmark is Morningstar Global Markets Sustainability Leaders, including net dividends, unhedged to DKK. Consequently the fund is passively managed.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The investment policy is based on Morningstar's construction rules for its Global Markets Sustainability Leaders Index (index for sustainable investments), see the table below.

Parameter	Morningstar Global Markets Sustainability Leaders Index
Objective	The Morningstar Global Markets Sustainability Leaders Index offers diversified exposure to large cap companies in the Morningstar Global Markets Index which display leadership within environmental, social and corporate governance issues in certain economic areas. The index represents a list focusing on ESG leaders which have included sustainability in their business models and consequently contribute to setting the standard within their business areas as regards eg carbon dioxide emissions, employee engagement and business ethics.
Performance measurement	21 December 2012
Investment universe	Morningstar Global Markets Large Cap Index
Product screening	In addition to the conventional product screening used in the various Morningstar Sustainability Indices, companies involved in civilian firearms, tobacco or nuclear production are also excluded. Moreover companies whose income from gambling, alcohol production or adult entertainment represents more than 50% are excluded.
Additional screenings	Companies are excluded as follows: <ul style="list-style-type: none"> • Controversy scores of 4 or 5 • Serious CO₂ risks • Non-compliance with the UN Global Compact principles • Three-month average daily turnover of less than USD 1m
Selection	<ul style="list-style-type: none"> • The remaining companies are ranked according to their sustainability scores. • The top 100 (most sustainable) companies are selected. • Region/sector weight differences are limited to +/- 15 percentage points relative to the investment universe to minimise deviations.
Weight	Companies are weighted on the basis of the float market cap. The index applies a 5-10-40 capping of individual companies. This means that an individual company weight cannot exceed 10% at the time of reconstitution and companies greater than 5% in weight cannot combine to over 40% of the portfolio. If a company's weight exceeds 10%, excessive weights are redistributed among the remaining companies belonging to the same sector. The 5-40 capping is then applied to the portfolio weights.
Reconstitutions	Semiannually
Rebalancing	Quarterly. Companies with a controversy score of 4 or 5 are deleted from the index.

Concordance between fund characteristics and benchmark characteristics

The benchmark has been selected on the basis of its environmental and social characteristics. The fund is an index fund with full replication and consequently there is congruity between the environmental and social characteristics of the fund and the benchmark.

Method to calculate benchmark

For a more detailed description of Morningstar Global Markets Sustainability Leaders Index, reference is made to Morningstar. The method to calculate the benchmark is available at this address:

Indeks Morningstar Leaders KL	394,819	968,271	1,631,037	1,156,988	1,570,652

¹ The fund's first return covers the period from 26 Nov 2018 to 31 Dec 2019.

In the attempt to fulfil the objective, the fund's investments follow the benchmark. The fund may invest up to 20% of its assets in one company.

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In order to maintain the fund's risk profile relative to the fund's benchmark, restrictions have been imposed. The different types of restrictions are summarised in the table below. The fund may be subject to restrictions that do not appear from the table. Ex-ante tracking error is a statistical model-based measurement of the expected maximum deviation of fund return at a probability of 68% from benchmark return within 12 months.

	Limitations (%)
Ex-ante tracking error	Maximum 2.0
Investments outside benchmark	Maximum 10

The fund invests as a minimum 90% of its assets in shares included in Morningstar Global Markets Sustainability Leaders Index.

Indeks Morningstar Leaders KL is the result of the screening as described in the above paragraph on the investment objective. Read more about measures to maintain risk in 7.2.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

5.2.12. Indeks Danmark KL

The fund invests in shares in companies forming part of the fund's index. The objective of the fund's composition of investments is to copy the index while taking into account transaction costs.

The fund consists of one unit class.

	Date of establishment	ISIN
Indeks Danmark A DKK	7 Jun 2021	DK0061541232

¹ The first financial reporting period runs from 7 Jun 2021 to 31 Dec 2021.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across Danish companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals the return of the fund's benchmark adjusted for costs while observing stipulated risk limits. The fund's benchmark is OMXC ALL CAP NI (the capped version of OMXC ALL CAP index, including net dividends). Consequently the fund is passively managed.

	2019	2020	2021	2022	2023
Return (%)					
Indeks Danmark A DKK ¹	-	-	6.28	(13.16)	5.42
<i>Benchmark</i> ²³	<i>26.66</i>	<i>29.38</i>	<i>6.71</i>	<i>(12.12)</i>	<i>5.77</i>
Assets (DKK 1,000)					
Indeks Danmark KL	-	-	154,046	199,665	250,524

¹ The fund's first return covers the period from 7 Jun 2021 to 31 Dec 2021.

² The benchmark's return for 2021 covers the period from 7 Jun 2021 to 31 Dec 2021.

³ The fund's benchmark for the period from 7 Jun 2021 to 31 Oct 2022 was OMXC ALL CAP GI.

In the attempt to fulfil the objective, the fund's investments follow the benchmark. The fund may invest up to 20% of its assets in one company.

The fund falls within Article 6 of the Disclosure Regulation and thus integrates sustainability risks in its investment decisions.

A sustainability risk is defined as an environmental, social or governance event or circumstance which, if it occurs, could have an actual or potential or adverse impact on the value of an investment.

Sustainability risks form part of the fund's investment decisions in conjunction with traditional risk measures and financial ratios which clarify the valuation of the assets comprised by the fund's investments.

Greenhouse gas emissions represent a large sustainability risk which may have a potentially large negative impact on the value of investments. Other types of sustainability risks which may impact the value of the fund's investments include: Violation of human rights or workers' rights, environmental pollution, strain on biodiversity, waste management in industrial production as well as product safety and data security.

Eliminating companies and sectors that are particularly sensitive to the examples of sustainability risks mentioned may reduce the fund's sustainability risk. However restricting the investment universe may result in a rise in volatility and potential underperformance relative to the fund's benchmark.

The underlying investments of this financial product do not take into account the EU criteria as regards environmentally sustainable activities.

Risk factors

The most significant risks for this fund are country risk and concentration risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In order to maintain the fund's risk profile relative to the fund's benchmark, restrictions have been imposed. The different types of restrictions are summarised in the table below. The fund may be subject to restrictions that do not appear from the table. Ex-ante tracking error is a statistical model-based measurement of the expected maximum deviation of fund return at a probability of 68% from benchmark return within 12 months.

	Limitations (%)
Ex-ante tracking error	Maximum 2.0
Investments outside benchmark	Maximum 10

The fund invests as a minimum 90% of its assets in shares forming part of OMXC ALL CAP GI.

Dividends

The fund complies with the requirements of the Danish Tax Assessment Act regarding minimum dividend distribution.

6. Funds taxed on a market-value basis

6.1. Bond funds

6.1.1. Mellemlange Obligationer Akkumulerende KL (Danish Bonds Acc KL)

The fund invests in bonds admitted to trading on a market in Denmark or on a market located in an EU/EEA country and the bonds must be denominated in DKK.

The fund is divided into 3 unit classes.

	Established	ISIN
Mellemlange Obligationer A DKK Akk	7 Jan 2015	DK0060585156
Danish Bonds B DKK Acc	18 May 2016	DK0060738672
Mellemlange Obligationer W DKK Acc	13 Jun 2017	DK0060853851

The typical investor

The typical investor has an investment horizon of at least 3 years and wishes to obtain a stable return on investments in Danish bonds. The typical investor uses the fund as part of a portfolio to reduce the portfolio's overall risk or as an individual investment if the investor's alternative investments are expected to generate returns which are lower than the expected returns of this fund. Investors are expected to know that the risk factors mentioned in 7 may lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a three-year period.

The fund's benchmark is 50% Nordea Constant Maturity 3 Year Government Bond Index and 50% Nordea Constant Maturity 5 Year Government Bond Index. Consequently the benchmark duration is close to 4 years. Information about the challenges of selecting a benchmark for Danish bond funds is available under "3. Important issues" above.

Mellemlange Obligationer Akk KL, total	795,274	699,279	865,000	3,748,809	4,092,945

Investments may be made in all types of bonds in DKK in accordance with the Danish Investment Associations, etc. Act.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

Risk factors

The most significant risks for this fund are country risk, credit risk and interest rate risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

- The benchmark duration will at all times be close to 4 years.
- The fund's effective duration may vary from 3 to 5 years.

Read more about measures to maintain risk in 7.2.

6.1.2. HøjrenteLande Akkumulerende KL (Emerging Market Bonds Acc KL)

The fund invests in bonds denominated in foreign currency from international bond markets offering a potential excess return compared with traditional bond markets.

Investments may also be made in similar depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy.

The fund's investments are denominated in foreign currency and may be hedged to DKK or EUR.

The fund is divided into 2 unit classes.

	Established	ISIN
HøjrenteLande A DKK Akk	25 Oct 2022	DK0062496717
HøjrenteLande W DKK Acc	25 Oct 2022	DK0062496980

Both unit classes started their activities on 16 October 2023 following a merger. In connection with the merger, which was adopted by the Investment Fund's general meeting on 6 September 2023, the funds HøjrenteLande Akkumulerende KL and HøjrenteLande Korte Obligationer Akkumulerende KL merged with HøjrenteLande Mix ESG Akkumulerende KL with the latter as the surviving fund. The date of the implementation of the merger was 13 October 2023.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high return and high annual dividends. Investors are expected to know that the fund may experience significant price fluctuations, see "Risk factors".

The objective is to generate a return that is equal to or higher than the fund's benchmark measured over a rolling three-year period through the allocation of a mixed portfolio of government bonds in hard and local currencies from countries within emerging markets.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The investment profile combines ESG analysis with fundamental value analysis of the investment opportunities. ESG covers the countries' level and development within environmental, social and governance issues. The fund actively selects and deselects issuers on the basis of eg ESG requirements and the greatest expectations regarding return potential. Consequently the fund differs significantly at times from the composition of its benchmark.

The investment strategy integrates ESG through a screening and analysis process for issuers in emerging market countries as well as state-owned and state-guaranteed companies of these countries. The fund assesses the ESG level and development of all issuers on a comprehensive basis. Where the fund assesses that the ESG criteria have not been met this typically leads to exclusion. At the same time the alternative issuers that can best substitute returns and risk properties are assessed so that the portfolio as a whole meets the investment objective.

The screening of countries and quasi-sovereign corporate bonds leads to exclusion according to the following principles:

1. Countries comprised by international sanctions, eg actual prohibitions, sanctions against the machinery of government and weapons export bans.
2. Countries for which the outcome of the manager's internal, quantitative and qualitative ESG process is below the applicable minimum criterion for responsible investment from time to time.
3. Quasi-sovereigns with confirmed serious violations of international norms defined by the 10 principles of the UN Global Compact.
4. Quasi-sovereigns whose business area includes activities where more than 5% of their turnover derives from fossil fuels (extraction, production, refining, distribution and sale), weapons, tobacco (production and distribution), alcohol, gambling and adult entertainment.

Given the above-mentioned limitations the fund may invest in debt instruments for the financing of specific and well-documented sustainable activities, eg green bonds. It is a condition for such investments that the instruments are issued by governments, state-owned or state-guaranteed companies in emerging markets, that the sustainable activity can be defined unambiguously and that it can be verified and approved as sustainable by an independent party.

In addition to the above the fund may invest in bond equivalent securities, for instance so-called depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy.

The fund's investments are denominated in foreign currency and may be hedged to the currency of the unit class.

Sovereign bond screening and exclusion (ESG process)

The fund has concluded a consultancy agreement concerning ESG screening with its investment adviser, Sydbank.

The screening applies to all sovereign and quasi-sovereign bonds in emerging markets. Individual quasi-sovereign bonds may be excluded on the basis of company-specific issues.

Screening process

Sydbank analyses ESG factors with a view to assessing the current level and long-term development potential in countries and the results are integrated in the composition of the final portfolio. The objective of the screening of countries' ESG qualities is furthermore to determine the minimum criteria that must be met for a country to be included in the investment universe.

If a country does not meet one or several of the criteria in the analysis process it will usually be excluded unless Sydbank recommends that it is included due to other qualitative factors, eg cases of current conditions which historical data cannot take into account.

The final exclusion list ("red" countries) is established according to the following principles:

- The "red" countries are excluded because one or several exclusion criteria are in play. Depending on the circumstances the list may also include quasi-sovereign bonds from "yellow" and "green" countries.
- Subject to certain conditions the "yellow" countries may be included in the investment universe but they must be monitored on an ongoing basis to ensure that they do not follow a clearly negative ESG trend.
- All the "green" countries are included in the investment universe.

The above categorisation combines quantitative and qualitative analysis where Sydbank makes a subjective and documented ESG assessment. Sovereign states develop gradually in terms of ESG issues and therefore Sydbank may compensate temporarily for a country's poor score by assigning additional points to the model following a qualitative assessment if Sydbank believes that the score does not adequately reflect factual positive conditions. Conversely a country may be removed from the investment universe if a qualitative assessment finds that the score does not adequately reflect factual negative conditions.

Establishment of the final exclusion list

The investment management company receives on a quarterly basis the proposed exclusion list from Sydbank along with a report on changes and developments in the ESG factors that are deemed relevant in connection with the investment universe. Moreover reporting may take place on an ad hoc basis at the request of Sydbank if required due to special circumstances.

The investment management company may decide independently to add countries to or remove countries from the final list. Following approval the exclusion list will be implemented in the fund's investment guidelines.

The fund's benchmark is 50% JP Morgan EMBI Global Diversified hedged to DKK and 50% JP Morgan GBI-EM Global Diversified unhedged to DKK.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index for emerging markets. Consequently the fund's characteristics and the benchmark's characteristics are not congruent.

Method to calculate benchmark

The unit classes' first return will cover the period from 16 Oct 2023 to 31 Dec 2023.

Risk factors

The most significant risks for this fund are foreign exchange risk, credit risk, interest rate risk, liquidity risk and emerging market risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In addition to the above limitations in relation to type of bond the following limitations will apply to the fund

- The fund's duration may vary a maximum of +/- 3 years from the benchmark duration.
- The fund's maximum position in non-investment grade bonds is 80% of assets.
- The average portfolio rating must always be B- (Standard & Poor's) or higher.
- A maximum of 20% of assets may be invested in a single currency, apart from EUR. The fund pursues an active currency policy. Consequently the fund may use derivatives to obtain the currency exposure required.

Investments may be made in bonds that meet the above criteria, subject to the following limitations/additions.

Type of bond	Maximum position (%)
Government bonds/government guaranteed bonds ¹	100
Quasi-sovereign corporate bonds	30

¹ Including bank issues where the primary underlying risk is related to government bonds if the issuing bank has been approved by the Board of Directors of the Investment Fund.

6.1.3. Emerging Market Blended Debt Acc KL

The fund invests in bonds from international bond markets offering a potential excess return compared with traditional bond markets.

Investments may also be made in similar depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy. The fund's investments are issued in foreign currency and may be hedged to DKK, EUR or USD.

The fund is divided into 1 unit class.

	Established	ISIN
Emerging Market Blended Debt I USD Acc	3 Apr 2017	DK0060792372

The typical investor

Investeringsforeningen Sydinvest, the fund Emerging Market Blended Debt Acc KL, the unit class Emerging Market Blended Debt I USD Acc targets and is reserved for institutional investors.

The typical investor has an investment horizon of at least three years and is looking to invest in a fund with an ethical profile and with a high degree of diversification across countries. Investors are expected to know that risk factors, see "Risk factors", may at times lead to significant price fluctuations within the fund.

The objective is to generate a return that is equal to or higher than the fund's benchmark measured over a rolling three-year period through the allocation of a mixed portfolio of government bonds in hard and local currencies from countries within emerging markets.

The fund may invest up to 10% of its assets in units in other UCITS, funds or other investment undertakings.

The fund does not engage in securities lending.

The Danish FSA has issued a standing approval to the Investment Fund to the effect that the individual funds of the Investment Fund may raise short-term loans of up to 10% of the fund's assets to provide interim financing in connection with transactions concluded.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The investment profile combines ESG analysis with fundamental value analysis of the investment opportunities. ESG covers the countries' level and development within environmental, social and governance issues. The fund actively selects and deselected issuers on the basis of eg ESG requirements and the greatest expectations regarding return potential. Consequently the fund differs significantly at times from the composition of its benchmark.

The investment strategy integrates ESG through a screening and analysis process for issuers in emerging market countries as well as state-owned and state-guaranteed companies of these countries. The fund assesses the ESG level and development of all issuers on a comprehensive basis. Where the fund assesses that the ESG criteria have not been met this typically leads to exclusion. At the same time the alternative issuers that can best substitute returns and risk properties are assessed so that the portfolio as a whole meets the investment objective.

The screening of countries and quasi-sovereign corporate bonds leads to exclusion according to the following principles:

1. Countries comprised by international sanctions, eg actual prohibitions, sanctions against the machinery of government and weapons export bans.
2. Countries for which the outcome of the manager's internal, quantitative and qualitative ESG process is below the applicable minimum criterion for responsible investment from time to time.
3. Quasi-sovereigns with confirmed serious violations of international norms defined by the 10 principles of the UN Global Compact.
4. Quasi-sovereigns whose business area includes activities where more than 5% of their turnover derives from fossil fuels (extraction, production, refining, distribution and sale), weapons, tobacco (production and distribution), alcohol, gambling and adult entertainment.

Given the above-mentioned limitations the fund may invest in debt instruments for the financing of specific and well-documented sustainable activities, eg green bonds. It is a condition for such investments that the instruments are issued by governments, state-owned or state-guaranteed companies in emerging markets, that the sustainable activity can be defined unambiguously and that it can be verified and approved as sustainable by an independent party.

In addition to the above the fund may invest in bond equivalent securities, for instance so-called depositary receipts such as GDNs (Global Depositary Notes), Pass-Through Notes or CLNs (Credit Linked Notes), which represent bonds in which the fund may invest in accordance with its investment policy.

The fund's investments are denominated in foreign currency and may be hedged to the currency of the unit class.

Sovereign bond screening and exclusion (ESG process)

The fund has concluded a consultancy agreement concerning ESG screening with its investment adviser, Sydbank.

The screening applies to all sovereign and quasi-sovereign bonds in emerging markets. Individual quasi-sovereign bonds may be excluded on the basis of company-specific issues.

Screening process

Sydbank analyses ESG factors with a view to assessing the current level and long-term development potential in countries and the results are integrated in the composition of the final portfolio. The objective of the screening of countries' ESG qualities is furthermore to determine the minimum criteria that must be met for a country to be included in the investment universe.

If a country does not meet one or several of the criteria in the analysis process it will usually be excluded unless Sydbank recommends that it is included due to other qualitative factors, eg cases of current conditions which historical data cannot take into account.

The final exclusion list ("red" countries) is established according to the following principles:

- The "red" countries are excluded because one or several exclusion criteria are in play. Depending on the circumstances the list may also include quasi-sovereign bonds from "yellow" and "green" countries.
- Subject to certain conditions the "yellow" countries may be included in the investment universe but they must be monitored on an ongoing basis to ensure that they do not follow a clearly negative ESG trend.
- All the "green" countries are included in the investment universe.

The above categorisation combines quantitative and qualitative analysis where Sydbank makes a subjective and documented ESG assessment. Sovereign states develop gradually in terms of ESG issues and therefore Sydbank may compensate temporarily for a country's poor score by assigning additional points to the model following a qualitative assessment if Sydbank believes that the score does not adequately reflect factual positive conditions. Conversely a country may be removed from the investment universe if a qualitative assessment finds that the score does not adequately reflect factual negative conditions.

Establishment of the final exclusion list

The investment management company receives on a quarterly basis the proposed exclusion list from Sydbank along with a report on changes and developments in the ESG factors that are deemed relevant in connection with the investment universe. Moreover reporting may take place on an ad hoc basis at the request of Sydbank if required due to special circumstances.

The investment management company may decide independently to add countries to or remove countries from the final list. When the exclusion list has been approved it is implemented in the fund's investment guidelines.

The benchmark of unit class I is 50% JP Morgan EMBI Global Diversified USD and 50% JP Morgan GBI-EM Global Diversified USD.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index for emerging markets. Consequently the fund's characteristics and the benchmark's characteristics are not congruent.

Risk factors

The most significant risks for this fund are credit risk, interest rate risk, foreign exchange risk, liquidity risk, CSR risk and emerging market risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In order to maintain the fund's risk profile, restrictions have been imposed. The different types of restrictions are summarised in the table below. The fund may be subject to restrictions that do not appear from the table.

- The fund's duration may vary by a maximum of +/- 3 years from the benchmark duration.
- The fund's maximum deviation from the allocation in the fund's benchmark is +/- 25% as regards the hard or the local currency asset class respectively.
- The fund's maximum position in non-investment grade bonds is 80% of assets.
- The average portfolio rating must always be B- (Standard & Poor's) or higher. A maximum of 20% of assets may be invested in a single currency, apart from USD. The fund pursues an active currency policy. Consequently the fund may use derivatives to obtain the currency exposure required.
- The fund (multi-class) and the individual unit classes may engage in currency hedging.

A maximum of 35% in EU countries, OECD countries and supranational issuers

The fund is allowed to invest up to 35% of assets in securities and money market instruments issued or guaranteed by a central authority or a central bank in a country which is a member of the European Union (EU) or OECD.

The fund is allowed to invest up to 35% of assets in securities and money market instruments issued or guaranteed by a public international body in which one or more member states is a member as long as the body is approved by the Danish FSA.

A maximum of 20% in large benchmark countries

The fund is allowed to invest up to 20% of assets in securities and money market instruments issued or guaranteed by a central authority or a central bank in Brazil, Russia, India, China, South Africa, Indonesia, Thailand, Malaysia, Colombia or the Philippines.

A maximum of 10% in other countries

The fund is allowed to invest up to 10% of assets in securities and money market instruments issued or guaranteed by a central authority or a central bank in countries not mentioned above.

Duration restrictions: Restrictions as regards exposure by way of duration. The term duration covers eg the price risk of bonds in which investments are made. The lower the duration, the more price-stable the bonds if interest rates change.

Restrictions as regards credit evaluation: Restrictions as regards credit evaluation of the individual securities.

Foreign exchange: Restrictions as regards the maximum amounts to be invested in individual currencies.

Ethics: Screening of HøjrenteLande Mix Etik Akkumulerende KL with regard to country exclusion as stated in the description of the fund.

Investments may be made in bonds that meet the above criteria, subject to the following limitations.

Type of bond	Maximum position (%)
Government bonds, quasi-sovereign corporate bonds and government guaranteed bonds ¹	100

¹ Including bank issues where the primary underlying risk is related to government bonds if the issuing bank has been approved by the Board of Directors of the Investment Fund.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high return. Investors are expected to know that the fund may experience significant price fluctuations, see "Risk factors".

Investment objective, benchmark and assets

The objective is through international diversification to obtain a return that equals or outperforms the return of the benchmark of the unit class over a four-year period.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process.

The benchmark of unit classes A and W is JP Morgan Global Bond Index – Emerging Markets Global Diversified unhedged to DKK. The benchmark of unit classes B and I is JP Morgan Global Bond Index – Emerging Markets Global Diversified unhedged to EUR.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of JP Morgan GBI-EM Global Diversified, reference is made to JP Morgan. The method to calculate the benchmark is available at this address:

<https://www.jpmorgan.com/content/dam/jpm/cib/complex/content/markets/composition-docs/pdf-26.pdf>

Risk factors

The most significant risks for this fund are foreign exchange risk, credit risk, interest rate risk, liquidity risk and emerging market risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In addition to the above limitations in relation to type of bond the following limitations will apply to the fund.

- The portfolio's effective duration may not deviate from the benchmark's effective duration by more than 3 years.
- The fund's maximum position in non-investment grade bonds is 80% of assets.
- The average portfolio rating must always be B- (Standard & Poor's) or higher.
- A maximum of 20% of assets may be invested in a single currency.
- The fund pursues an active currency policy. Consequently the fund may use derivatives to obtain the currency exposure required. The fund (multi-class) and the individual unit classes may engage in currency hedging.

Investments may be made in bonds that meet the above criteria, subject to the following limitations/additions.

Type of bond	Maximum position (%)
Government bonds/government guaranteed bonds ¹	100
Quasi-sovereign corporate bonds	30

¹ Including bank issues where the primary underlying risk is related to government bonds if the issuing bank has been approved by the Board of Directors of the Investment Fund.

Read more about measures to maintain risk in 7.2.

6.1.5. Virksomhedsobligationer HY Akkumulerende KL

The fund invests in corporate bonds with a high expected return (High Yield) denominated in foreign currency from foreign bond markets and in unlisted corporate bonds denominated in foreign currency from US markets. Foreign mortgage bonds and government bonds may at times form part of the portfolio. The fund invests predominantly in European corporate bonds.

The fund is divided into 2 unit classes.

	Established	ISIN
Virksomhedsobligationer HY A DKK Akk	24 Sep 2007	DK0060089415
Virksomhedsobligationer HY W DKK Acc h	16 Jun 2015	DK0060646982

The typical investor

The typical investor has an investment horizon of 4 years and is looking for a high degree of diversification across bonds issued by companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a four-year period. The aim is to have satisfactory diversification geographically as well as across industries and issuers.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process.

The fund's benchmark is ICE BofA Euro HY Index hedged to DKK.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of ICE BofA Euro High Yield Index, reference is made to ICE. The method to calculate the benchmark is available at this address:

<https://indices.theice.com/home#>

The fund may invest in bonds within all industries. No limits as regards the allocation of assets by industry have been determined but the fund aims to have an even diversification across many industries.

Risk factors

The most significant risks for this fund are credit risk, interest rate risk and liquidity risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

- Unlisted US corporate bonds are of highly varying quality and therefore the fund invests only in bonds with:
 - an outstanding volume representing at least USD 100m or its equivalent in another currency
 - a credit rating that is higher than CC by Standard & Poor's or Ca by Moody's at the time of acquisition
 - at least 2 of the internationally leading brokerage firms acting as daily market makers.
- The majority of the fund's investments will be denominated in EUR or hedged to DKK or EUR.
- The average portfolio rating must always be B or higher.
- Currency positions in DKK and EUR must represent at least 90% of assets. Other currency positions may not exceed 10% of assets.

Investments may be made in bonds that meet the above criteria, subject to the following limitations.

Type of bond	Maximum position (%)
Foreign corporate bonds	100
Foreign government bonds/government guaranteed bonds	50
Foreign mortgage bonds/bonds issued by shipping finance institutions/municipal bonds	50

6.2. Equity funds

6.2.1. Global Value Akkumulerende KL (Global Value Equities Acc KL)

The fund invests globally in shares.

Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs). The fund may invest in Chinese A shares through China Connect.

The fund is divided into 3 unit classes.

	Established	ISIN
Global Value A DKK Akk	21 Oct 2015	DK0060669091
Global Value Equities B EUR Acc	16 Jun 2015	DK0060647600
Global Value W DKK Acc	5 Oct 2016	DK0060751428

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms the return of the fund's benchmark over a four-year period while observing the fund's risk limits.

The fund invests globally in shares. Investments are diversified across different countries and industries. The fund's largest investments are in USA and Europe. The fund pursues a value strategy. When investing according to a value strategy, we select companies that are inexpensively priced based on a number of financial ratios relative to the share price of the companies.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The benchmark of unit classes A and W is MSCI All Country World Index, including net dividends, unhedged to DKK. The benchmark of unit class B is MSCI All Country World Index, including net dividends, unhedged to EUR.

	2019	2020	2021	2022	2023

1 Up to and including 31 May 2024 the benchmark of unit classes A and W was MSCI All Country World Index, including net dividends, unhedged to DKK. The benchmark of unit class B was MSCI All Country World Index, including net dividends, unhedged to EUR.

Concordance between fund characteristics and benchmark characteristics

The fund's benchmark is a broad index. Consequently the fund's characteristics and the benchmark's characteristics are not fully congruent.

Method to calculate benchmark

For a more detailed description of MSCI World Value Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

In the attempt to fulfil the objective, the fund's investments will typically deviate from benchmark.

In recent years region and sector level returns have been affected to varying degrees by cyclical and structural developments. Currently there are no expectations of large differences in the future returns of individual regions and sectors.

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

The fund's risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error).

Read more about measures to maintain risk in 7.2.

6.2.2. Megatrends Akkumulerende KL

The fund invests globally in shares. Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs).

The fund may invest in Chinese A shares through China Connect.

The fund has been established with 1 unit class.

	Established	ISIN
Megatrends A DKK Akk	14 Mar 2023	DK0062382891

The first financial reporting period of the unit classes runs from 15 May 2023 to 31 Dec 2023.

The fund will invest in companies within various themes which may be derived from different megatrends related to eg:

- Demographic change
- Climate change
- Consumer of the future
- Transport of the future
- Technological innovation

The list is not exhaustive as there are many more possibilities and in addition the themes may change over time. Within each megatrend there is a number of themes in which the funds can choose to invest.

The typical investor

The typical investor has an investment horizon of at least 4 years and is looking for a high degree of diversification across countries, sectors and companies as a good long-term investment opportunity. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals or outperforms returns in global share markets over a four-year period while observing the fund's risk limits.

The fund will at times differ significantly from benchmark. The fund will invest in selected megatrends, which involves overweighting megatrend companies and underweighting companies that are not part of the selected megatrends. Consequently the fund's ex-ante and ex-post tracking error relative to benchmark may be very high at times. Similarly the fund's return will at times differ significantly from benchmark return.

The fund falls within Article 8 of the Disclosure Regulation and thus promotes environmental and/or social characteristics as well as good governance practices. Further information is provided in Appendix 1.

The fund's environmental and social characteristics

The fund promotes environmental and social issues as well as corporate governance and focuses on various sustainability indicators in the investment process, for instance by exercising active ownership.

The fund's benchmark is MSCI All Country World Index, including net dividends, unhedged to DKK.

Concordance between fund characteristics and benchmark characteristics

The fund’s benchmark is a broad index. Consequently the fund’s characteristics and the benchmark’s characteristics are not congruent.

Method to calculate benchmark

For a more detailed description of MSCI Emerging + Frontier Markets Index, reference is made to MSCI. The method to calculate the benchmark is available at this address:

https://www.msci.com/eqb/methodology/meth_docs/MSCI_IndexCalcMethodology_Nov2020.pdf

Risk factors

The most significant risks for this fund are foreign exchange risk, liquidity risk, emerging market risk and CSR risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund’s risk profile

The fund’s risks are continuously managed on the basis of the past price movements of the fund relative to overall market developments (tracking error).

Read more about measures to maintain risk in 7.2.

6.2.6. Indeks Globale Aktier Lav Risiko KL

The fund invests globally in shares and other securities which are comparable to shares and which form part of the fund's index. The objective of the fund's composition of investments is to copy the index while taking into account transaction costs.

Investments may also be made in similar depositary receipts such as American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs). The fund may invest in Chinese A shares through China Connect.

The fund is not divided into unit classes.

	Established	ISIN
Indeks Globale Aktier Lav Risiko KL	25 Feb 2020 ¹	DK0061281490

¹ The fund's first financial reporting period runs from 27 May 2020 to 31 Dec 2020.

The typical investor

The typical investor has an investment horizon of at least 4 years and wishes to invest in an equity fund which aims to achieve low volatility via its investments. Investors are expected to know that risk factors, see "Risk factors" below, may at times lead to significant price fluctuations within the fund.

Investment objective, benchmark and assets

The objective is to obtain a return that equals the return of the fund's benchmark adjusted for costs while observing stipulated risk limits. The fund's benchmark is MSCI World Minimum Volatility Index in EUR, including net dividends, unhedged to DKK. In the attempt to fulfil the objective, the fund's investments follow the benchmark. The fund may invest up to 20% of its assets in one company.

Consequently the fund is passively managed.

	2019	2020	2021	2022	2023
Return (%)					
Indeks Globale Aktier Lav Risiko KL ¹	-	0.85	21.76	(4.95)	4.35
<i>Benchmark</i> ²	25.76	0.62	22.19	(4.76)	4.61
Assets (DKK 1,000)					
Indeks Globale Aktier Lav Risiko KL	-	282,961	346,696	419,611	384,614

¹ The fund's first return covers the period from 27 May 2020 to 31 Dec 2020.

² The benchmark return for 2020 covers the period from 27 May 2020 to 31 Dec 2020.

The fund falls within Article 6 of the Disclosure Regulation and thus integrates sustainability risks in its investment decisions.

A sustainability risk is defined as an environmental, social or governance event or circumstance which, if it occurs, could have an actual or potential or adverse impact on the value of an investment.

Sustainability risks form part of the fund's investment decisions in conjunction with traditional risk measures and financial ratios which clarify the valuation of the assets comprised by the fund's investments.

Greenhouse gas emissions represent a large sustainability risk which may have a potentially large negative impact on the value of investments. Other types of sustainability risks which may impact the value of the fund's investments include: Violation of human rights or workers' rights, environmental pollution, strain on biodiversity, waste management in industrial production as well as product safety and data security.

Eliminating companies and sectors that are particularly sensitive to the examples of sustainability risks mentioned may reduce the fund's sustainability risk. However restricting the investment universe may result in a rise in volatility and potential underperformance relative to the fund's benchmark.

The underlying investments of this financial product do not take into account the EU criteria as regards environmentally sustainable activities.

Risk factors

The most significant risk for this fund is foreign exchange risk. Risk categories and risks are described in further detail in 7.

Measures taken to maintain the fund's risk profile

In order to maintain the fund's risk profile relative to the fund's benchmark, restrictions have been imposed. The different types of restrictions are summarised in the table below. The fund may be subject to restrictions that do not appear from the table. Ex-ante tracking error is a statistical model-based measurement of the expected maximum deviation of fund return at a probability of 68% from benchmark return within 12 months.

	Limitations (%)
Ex-ante tracking error	Maximum 2.0
Investments outside benchmark	Maximum 10

The fund invests as a minimum 90% of its assets in shares forming part of MSCI World Minimum Volatility Index.

Dividends

The fund is taxed on a market-value basis, see 18. The fund distributes a voluntary dividend in December in the year the return has been generated. Dividend is calculated as 70% of the positive return which has been achieved during the first eleven months of the calendar year.

Other unit class data	Fund
SE no	41284285
Risk category	3
Listed on	Nasdaq Copenhagen
Issue and redemption pricing	Dual pricing
Base currency	DKK
Denomination	100
Notification of marketing in	Denmark
Currency hedging	No

Taxation

The fund is taxed on a market-value basis. Net capital gains as well as dividends distributed are subject to income tax during the income year. The fund will be reported as an equity fund subject to equity income taxation. Investors must be aware that reporting will take effect as from 2021. Therefore in 2020 the fund will be subject to capital income taxation.

7. Risks for individual funds/unit classes

As in the case of any investment, investments in units in funds/unit classes entail a risk of loss for investors. The return on an investment may be positive or negative and will often be either higher or lower than expected. The risk associated with funds and unit classes is rated on a scale from 1 to 7. The risk category shows the typical correlation between risk and return potential in connection with investments in the fund/unit class and is determined on the basis of the classification method used by the EU where risk category 1 represents a low risk and usually a low expected return and risk category 7 represents a high risk and usually a high expected return. Risk category 1 is not risk-free.

The ranking on the risk scale is not permanent and may shift over time. This is because historical data on return does not give a precise picture of the future risk profile.

The current ranking on the risk scale appears from the Key Investor Information document, which is prepared for each fund/unit class and can be downloaded free of charge at sydinvest.dk. As regards unit class B the material can be downloaded free of charge at sydinvest.de. The ranking on the risk scale will also appear from the descriptions of the funds/unit classes above in item 6.

7.1. Types of risk

The individual funds/unit classes are affected by different types of risk. The description of risks is not and cannot be exhaustive. The individual types of risk are described in further detail below. In addition to the risks mentioned, return may be affected by unforeseen events such as sudden devaluations, interest rate changes and political events.

7.1.1. General risks

Market risk – bonds: Return will be affected by for instance changes in interest rates, exchange rates, economic developments as well as changes in the financial circumstances of the bond issuer, including the rating of the issuer.

Market risk – equities: As regards funds investing in equities, prices must be expected to fluctuate more than bond prices. Return will be affected by for instance the financial circumstances and expectations regarding the companies invested in, exchange rates as well as the overall trend in the economy.

Counterparty risk: In connection with the conclusion of transactions there may be a risk that the counterparty will not honour its obligations. This is the case for instance when derivatives are used where losses and gains will be exchanged at a later point in time.

Operational risk: All investments involve a risk of errors. If errors occur in connection with the management of the fund, this may affect return.

Foreign exchange risk: Investments in foreign securities are sensitive to exchange rate movements. Therefore the price of the individual fund or unit class will be impacted by the extent of investments in foreign securities and fluctuations in exchange rates against DKK. Investments in Danish equities involve an indirect foreign exchange risk as Danish companies frequently compete with foreign companies. A strengthening of DKK weakens competitiveness and consequently the earnings potential of Danish companies, which may have a negative impact on share prices. Funds or unit classes with systematic hedging against DKK have a very limited foreign exchange risk.

Country risk: When investing in securities in a single country or a few countries investors assume the specific risk that this particular country or these particular countries may be exposed to specific political or regulatory measures. In addition specific market-related and economic conditions in this particular country, including possibly also exchange rate developments, will have a major impact on the value of the investment. These country-specific risks may be reduced by investing in funds with broad investments across a number of countries.

Sector risk: If large investments are made within a specific sector, return is highly dependent on developments within this particular sector.

Credit risk: Credit risk is the risk that the issuers of government bonds or corporate bonds in which the fund has invested cannot fully service their debts. The fund may suffer losses as the result of a bankruptcy/sovereign bankruptcy.

Interest rate risk: The interest rate level varies from region to region and must be seen in the context of for instance the level of inflation. The interest rate level has a significant bearing on how attractive it is to invest in eg bonds. Also, changes in interest rates may result in price declines or price increases. When interest rates go up, prices may go down.

Liquidity risk: In some situations it may be difficult to trade securities at their real value. This may be due to a lack of interest in the securities in the given situation. This is typically the case if it is a relatively small issue and the securities are rarely traded or if there are extreme market circumstances where many investors wish to sell the same type of securities at the same time. This may be either directly in the market or through an investment fund which will then have to act in the market on behalf of investors. In such cases the difference between buying and selling prices will be

considerable. The liquidity risk is most pronounced when selling securities and indicates that the securities can only be sold at significantly lower prices than their actual value based on the price that can be obtained for smaller holdings of securities. In extreme circumstances where many investors choose to sell their units at the same time, the liquidity risk may entail that some funds are forced to suspend the possibility of redeeming units until market conditions allow them to do so again.

Emerging market risk: New markets (emerging markets) include almost all countries in Latin America, many countries in Asia, Eastern Europe, Africa and the Middle East. Generally these countries are more politically unstable than countries in mature markets. Their financial markets are not as well organised as in mature markets and economic developments may vary considerably. As a result investments in these regions involve a higher risk than investments in mature markets.

For investors this may be reflected for instance in a greater risk of nationalisation, the introduction of exchange control regulations or violent political upheavals. These are all factors that at a given time may lower the value of the investment and that at times may mean that trading in these markets is not possible.

China Connect: The funds Verden Ligevægt & Value KL, Verden Ligevægt & Value Akkumulerende KL, Verden Ligevægt & Value Etik KL, Verden Etik Indeks KL, Morningstar sustainability Leaders Index KL, Fjernøsten KL, Fjernøsten Akkumulerende KL, BRIK KL, BRIK Akkumulerende KL, Globale EM-aktier KL, Globale EM-aktier Akkumulerende KL, Megatrends KL, Megatrends Akkumulerende KL and Verden Lav Volatilitet Indeks KL have the possibility of investing in Chinese A shares through China Connect.

China Connect is a method whereby certain Chinese A shares can be traded via the Hong Kong Stock Exchange. The stock exchanges involved in China Connect are Shanghai, Shenzhen and Hong Kong, which are all members of the WFE (World Federation of Exchanges).

The Hong Kong Stock Exchange keeps in custody the securities which are traded through China Connect. Hence these securities are kept in custody outside the Investment Fund's custodian Sydbank A/S. As the Hong Kong Stock Exchange is a member of the WFE and because the securities are kept in a separate custody account, this counterparty risk is considered to be acceptable.

CSR risk: Focus on corporate social responsibility (CSR) is not equally widespread in all markets. Especially in the new markets there is a considerable risk that businesses do not live up to the recommendations concerning eg workers' rights and the environment that are typically implemented in developed markets.

Concentration risk: The funds and unit classes spread their investments across many different securities to lower the dependency on the price development of a single security. Nevertheless specific circumstances within a geographical area, a sector or a type of security may have a significant impact on return. When investing within a narrow investment universe, a fund or unit class may be forced to concentrate a large part of its assets in relatively few securities to reflect the market, and consequently the risk diversification will not be quite as good as in funds or unit classes with a wider investment universe.

Sustainability risks: A sustainability risk means an environmental, social or governance event or circumstance which, if it occurs, could have a de facto or potential significant adverse impact on the value of an investment.

When planning the management of assets in funds, we attach importance to the fact that they comply with the UN's principles for responsible investment, PRI. This entails for instance:

- that environmental, social and corporate governance (ESG) issues are incorporated in investment decisions
- that we use an engagement approach in relation to influencing investee companies that do not fully live up to our expectations regarding ESG issues.

We consider sustainability risk as a dimension of the overall risk scenario in line with other financial risks. This means that the composition of investments within the individual funds is based on an assessment of the return potential relative to the estimated risk, including sustainability risk, which the individual fund chooses to take.

If the realised sustainability risks deviate from the estimated risks the value of the investments within the individual funds may be impacted. This impact can be positive as well as negative. The impact may occur if environmental, social or governance events or circumstances occur. If these events or circumstances contribute to an increase in the estimated risk, the value of a fund's investments may be adversely impacted and vice versa.

Environmental disasters caused by companies' actions, companies' violations of workers' rights and management failure are examples of events or circumstances which could have a negative impact on the value of a fund's investments.

Other things being equal sustainability risks will be highest in funds based on issues by companies and lowest in funds based on issues by governments. Funds based on emerging market issues are estimated to have a higher sustainability risk than mature market issues.

7.2. Measures taken to maintain risk profile

In order to maintain the risk profile of a fund, restrictions have been established, see the above descriptions of the individual funds in 7.1. The different types of restrictions are summarised in the table below. Restrictions may have been imposed that do not appear from the table. Under the law, all funds and unit classes must spread their investments across several securities.

Market restrictions: There are restrictions as to the markets that may be included in the portfolio.

Tracking error: Risks are continuously managed on the basis of the fund's past price movements relative to overall market developments measured by the fund's benchmark. Ex-ante tracking error is a statistical model-based measurement of the expected maximum deviation of fund return at a probability of 68% from benchmark return within 12 months.

Duration restrictions: Restrictions as to the extent of risk assumed by way of duration. The term duration covers eg the price risk of bonds in which investments are made. The lower the duration, the more price-stable the bonds if interest rates change.

Credit rating restrictions: Restrictions as to the credit rating of individual securities.

Sector restrictions: Restrictions as to the sectors in which investments may be made.

Foreign exchange: Restrictions as to how much may be invested in individual currencies.

Ethics: Screening is carried out within business areas, which is stated in the description of the fund.

8. Efficient portfolio management techniques and collateral management

All funds may conduct securities financing transactions, ie repurchase agreements (repos) and securities lending, within the investment limits of the individual funds and the rules governing the area from time to time.

Repo agreements are not concluded at present.

Under securities lending transactions, the fund transfers (lends) securities to a borrower on the condition that the borrower returns securities of the same type on a future date or when requested to do so by the fund.

Currently none of the funds of the Investment Fund engage in securities lending.

Securities lending entails a risk of default on the part of the borrower and a risk that the borrower will not be able to return the securities borrowed, which will result in a loss for the fund and subsequently the investors. Such a loss may amount to the market value of the securities as well as the fund's positive transaction costs. This risk, which is dependent on the borrower and the agreement with the securities lending agent, must be described and assessed before a fund can use securities lending.

A repurchase agreement means an agreement by which a fund transfers securities when the agreement does not allow the counterparty to transfer or charge a particular security to more than one counterparty at a time, subject to an obligation to repurchase the same or securities of the same type at a specified price on a future date (to be) specified by the transferor.

Only funds based on Danish bonds conclude repurchase agreements. Repurchase agreements may represent up to 20% of the funds' assets and are concluded exclusively with Sydbank A/S as the counterparty.

On the conclusion of repurchase agreements an amount corresponding to the value of the bonds is exchanged. If the bond value changes, the fund may suffer a loss if the counterparty does not fulfil its obligation and the fund is forced to buy/sell bonds in the market.

Collateral may only be received by way of cash which is placed in Sydbank A/S. Cash is valued at 100%.

9. Remuneration policy

The management company has introduced a remuneration policy the object of which is not to encourage excessive risk-taking. The management company has implemented a number of measures to ensure that employees do not take unnecessary risks that are inconsistent with the risk profile or articles of association of the managed UCITS or at variance with the management company's obligation to act in the best interest of the managed UCITS.

The remuneration policy supports the business strategy, objectives, values and long-term interests of the UCITS managed by the management company and their investors. Moreover the policy supports the business strategy, objectives, values and long-term interests of the management company and the Sydbank Group (which owns two-thirds of the shares in the management company) as well as integration of sustainability risks. The aim of the governance structure of the remuneration policy is to avoid conflicts of interest.

The individual fixed monthly remuneration of the management company's employees is determined on the basis of a weighting of financial and non-financial targets associated with specific job descriptions. The fixed remuneration criteria consist of job complexity, responsibility, performance and market-related issues.

In line with the objective of the remuneration policy of not encouraging excessive risk-taking, no form of guaranteed annual bonus schemes in the management company have been agreed, neither as regards the board of directors, the executive management, the group of material risk takers and control function staff nor other employees.

Under the remuneration policy the executive management, the group of material risk takers and control function staff as well as other employees may receive an annual bonus or other bonus based on an individual performance assessment. As regards the executive management such assessment is made by the board of directors and as regards all other staff the assessment is made by the executive management.

Any bonus may not exceed one year's salary.

Share options are not currently offered as a bonus element but may in exceptional cases be included subject to a unanimous decision by the board of directors. Severance pay may not exceed 2 years' salary.

According to the performance assessment principles the employee's performance as well as long-term value creation are assessed. Furthermore the assessment constitutes an overall evaluation of the employee's business and cooperative skills etc.

Any bonus payments are made in compliance with applicable legislation and rules.

The board of directors of the management company reviews the remuneration policy once a year and if changes are required such changes are submitted for approval by the general meeting at the next annual general meeting. Investors can request a free written summary of the remuneration policy, which is also available on the website www.sydinvest.dk.

1 The first total expense ratio covers a period that may be longer or shorter than 12 months.

2 The first total expense ratio will appear when the 2023 Annual Report has been incorporated into the prospectus.

The funds' expected returns, total expense ratios, transaction costs etc appear from the funds' key investor information documents, which are accessible at the following websites:

Funds without unit classes:	www.sydinvest.dk
Unit classes A:	www.sydinvest.dk
Unit classes B:	www.sydinvest.de and www.sydinvest.com
Unit classes I:	www.sydinvest-em.com
Unit classes W:	www.sydinvest-engros.dk

11. Net asset value

The net asset value (NAV) of a fund's units is calculated by dividing the value of assets at the valuation point by the number of units subscribed.

The net asset value of units in a unit class is calculated by dividing the part of the fund's assets calculated at the valuation point which is equivalent to the part of the joint portfolio on which the unit class receives a return, adjusted for any class-specific assets and costs which the unit class must pay, by the number of units subscribed in the unit class.

12. Issue and redemption

The funds of the Investment Fund use the dual pricing system, unless otherwise stated in the description of the individual funds in Article 6 of the Articles of Association. If a fund is divided into unit classes, the pricing system of each unit class is determined by the Board of Directors of the Investment Fund and is stated in this prospectus in the description of unit classes of each individual fund.

Sell-back or redemption of units is possible at any time through the custodian or the custodian's branches subject to customary transaction costs. This applies to the transfer of the investment to other funds or unit classes of the Investment Fund as well. The Investment Fund is obliged to redeem investors' units on demand. The Investment Fund may postpone the redemption (I) when the Investment Fund is unable to calculate NAV due to market conditions, or (II) when the Investment Fund for purposes of equal treatment of investors does not calculate the redemption price until the Investment Fund has realised the assets necessary to redeem the units. Furthermore the Danish FSA may demand that the Investment Fund postpones the redemption of units. No Investment Fund investor is obliged to have his units redeemed unless the general meeting resolves to dissolve the fund.

12.1. Dual pricing system

When using the dual pricing system the issue price is determined as the net asset value, cf Article 10 of the Articles of Association, made up at the time of issue plus an amount to cover costs relating to the purchase of financial instruments and necessary issue costs, including administration, printing, advertisements and commission to agents and guarantors of the issue, before rounding in accordance with the tick sizes appearing from the Nasdaq Nordic Market Model for investment funds.

The redemption price is determined as the net asset value made up at the time of redemption less an amount to cover costs relating to the sale of financial instruments and necessary redemption costs before rounding in accordance with the tick sizes appearing from the Nasdaq Nordic Market Model for investment funds.

Total issue and redemption costs as regards funds or unit classes priced according to the dual pricing system are as set out below. In exceptional circumstances where other market-related costs of purchase/sale of securities change significantly, total issue and redemption costs may deviate considerably from the rates listed in the tables. In the event of significant deviations from the standard, the changes in costs will be published in an announcement via Nasdaq Copenhagen and/or the Investment Fund's website. The same applies when circumstances return to normal.

The individual types of costs are stated in percentage terms of NAV.

It is customary for units subscribed at tap issue to be settled at the same time as the units are registered with VP Securities A/S. Unit certificates are issued via VP Securities A/S after which the units are registered on the investor's VP account.

Units are kept in custody by Danish banks free of charge. However portfolio changes in the VP account are subject to a customary VP fee.

Investment Fund tap issues are not subject to a fixed maximum.

12.2. Modified single pricing system

The Investment Fund calculates the net asset values of funds and unit classes daily at approx 12:00 CET (valuation point) to be used in connection with issues and redemptions.

When using the modified single pricing system the Investment Fund determines one or more points in time to calculate the issue price or redemption price. The price is determined as the net asset value made up at the valuation point. If net issues for the period exceed a number of units determined by the Board of Directors, the Investment Fund must determine the issue price as the net asset value plus a fee to cover transaction costs. If net redemptions for the period exceed a number of units determined by the Board of Directors, the Investment Fund must determine the redemption price as the net asset value less a fee to cover transaction costs. The Board of Directors of the Investment Fund must determine the size of this fee, which is set out in the table below. The fees stated may be exceeded in periods of exceptional market conditions which cause other market-related expenses of purchasing and selling instruments of the individual fund to rise. If such a situation occurs the Investment Fund will provide information about the actual fees on its website during this period

Unit class B	Net issue or redemption larger than rate stated in percentage terms of class assets	Fee to cover issue/redemption costs (%)
Danish Bonds B DKK Acc	0.50	0.15
Far East Equities B EUR Acc	0.15	0.34 / 0.42
Global EM Equities B EUR Acc	0.25	0.32 / 0.39
Global Value Equities B EUR Acc	1.00	0.19 / 0.16

A fee (percentage amount) to cover issue/redemption costs will be triggered when the net issues or redemptions calculated on a daily basis exceed the rate in percentage terms of the assets of the unit class.

As regards issues the agent may include a subscription commission which may not exceed the rates stated below under the individual funds. The rates are stated in percentage terms of NAV.

Unit class B	Maximum fee to financial agents in percentage terms of NAV
Danish Bonds B DKK Acc	2.75
Far East Equities B EUR Acc	5.00
Global EM Equities B EUR Acc	5.00
Global Value Equities B EUR Acc	5.00

13. Publication of issue and redemption prices

Information on current issue and redemption prices as well as net asset values of funds and unit classes is available at the following websites:

Funds with no unit classes: www.sydinvest.dk and www.nasdaqomxnordic.com
Unit class A: www.sydinvest.dk and www.nasdaqomxnordic.com
Unit class B: www.sydinvest.de and www.sydinvest.com
Unit class I: www.sydinvest-em.com
Unit class W: www.sydinvest-engros.dk

As regards funds without unit classes and unit classes A, net asset values and issue and redemption prices are also published via Nasdaq Copenhagen.

14. Unit size and issuance of units

Units are registered with a central securities depository and issued by the central securities depository in denominations of DKK 100 or in multiples thereof. In funds with unit classes the denomination of units issued is determined by the Board of Directors and the denomination appears from the prospectus under each of the funds that have established unit classes. All funds and unit classes issue units. No physical certificates are issued.

All funds are denominated in DKK but unit classes may be denominated in other currencies. If this is the case the specific currency will be stated in the description of the individual funds and unit classes.

15. Registration

Units are made out to bearer but may, upon request to the deposit-taking institution, be registered in the name of the holder in the Investment Fund's books.

The Investment Fund maintains its own register of unit holders.

16. Dividend distribution

Funds and unit classes that are taxed on a realisation basis distribute dividends in compliance with section 16C of the Danish Tax Assessment Act regarding minimum dividend distribution. However in the years when capital gains without an obligation to distribute dividends have been obtained, the funds Korte Obligationer KL, Fonde KL, Mellemlange Obligationer KL, Højrentelände KL distribute dividends consisting of interest income less administrative costs, however dividends not exceeding 2% of the nominal assets. In income funds dividends may be distributed after the end of the financial year but before the annual general meeting. If, in exceptional cases, the dividend distribution does not comply with the rules of section 16C of the Danish Tax Assessment Act, an additional dividend distribution may be decided. The size of the dividend distribution is approved at the annual general meeting.

Funds targeting German clients must also comply with the German tax requirements on determination of dividends.

In connection with the distribution of dividends from all equity funds, a dividend tax of 27% will be withheld.

As a rule dividend tax will not be withheld in connection with the distribution of dividends from pure bond funds. If a pure bond fund subsequently happens to hold shares the fund may be ordered to withhold dividend tax in connection with the distribution of dividends.

Dividend tax will not be withheld in connection with the distribution of dividends to children's savings accounts and pension scheme funds falling under the Danish Act on Taxation of Pension Yields.

As a rule funds taxed on a market-value basis do not distribute dividends.

The dividend distribution profile of the fund Verden Lav Volatilitet Indeks KL has been determined in advance.

17. Ex-dividend units

According to the Articles of Association of the Investment Fund, the Board of Directors may issue ex-dividend units apart from ordinary cum dividend units from January and until the annual general meeting of the Investment Fund.

When determining the issue and redemption prices of units, adjustments are made as regards the calculated and revised dividends of the preceding accounting year, cf separate appendix to the prospectus.

18. Taxation of investors

Funds taxed on a realisation basis

The funds and unit classes are not liable to pay tax, cf section 1(1)(v) of the Danish Corporation Tax Act.

As regards individuals, dividends are taxed at the date of distribution. The tax provisions aim at taxing investment return achieved through the Investment Fund according to principles similar to those applying to direct investments in securities. General information on the provisions can be obtained at the Investment Fund. For more detailed information it is recommended that investors contact their own advisers. Dividends will be itemised by the Investment Fund according to the relevant income categories.

Companies are taxed according to a market-value principle, ie dividends as well as realised and unrealised price changes are included in corporate income.

Pension savings are taxed according to a market-value principle, ie dividends as well as realised and unrealised price changes are included in the tax basis, cf the Danish Act on Taxation of Pension Yields.

The funds are not suited for capital falling under the Danish Business Tax Scheme as investments in income funds are regarded as a withdrawal of the amount invested.

Statutory reporting to the tax authorities is made through the bank where the units have been placed in custody.

The determination of dividends in funds that have established a unit class B, targeting German investors, must comply with the provisions of the Danish Tax Assessment Act on minimum income as well as German statutory provisions (Investmentsteuergesetz) on amounts available for distribution.

Funds taxed on a market-value principle

For tax purposes the funds are subject to section 19 of the Danish Capital Gains Tax Act. As a rule tax is not paid in the funds, however dividends on Danish shares are taxable at 15%. Dividend tax is deducted from dividends on foreign shares at the rate in accordance with the double taxation treaty, which may vary, but which in many instances is 15%.

All investors are taxed according to a market-value principle, ie realised as well as unrealised price changes are included in income.

As regards individuals, return is included in capital income.

As regards companies, return is included in corporate income.

As regards pension savings, return is taxable at 15.3% according to the Danish Act on Taxation of Pension Yields.

The funds are well-suited for capital falling under the Danish Business Tax Scheme.

Statutory reporting to the tax authorities is made through the bank where the units have been placed in custody.

19. Rights

No unit carries any special rights.

20. Transferability and negotiability

The units are negotiable instruments and therefore freely negotiable.

Units in the Investment Fund's funds can be purchased at Sydbank's branches and – apart from units in class W – also at all other banks and brokers. As regards unit classes in the individual funds purchase and sale may be limited to specific groups of investors.

21. Voting rights

Investors in the Investment Fund are entitled to attend the general meeting on presentation of an admission card. Admission cards can be obtained from the Investment Fund or from a representative indicated by the Investment Fund no later than 5 banking days prior to the general meeting on presentation of adequate proof of possession of units in the Investment Fund.

Investors can only exercise voting rights in relation to units which one week prior to the general meeting have been registered in the name of the relevant unit holder in the Investment Fund's books (or deposited with the custodian).

Each investor has one vote for each unit of a nominal value of DKK 100. In relation to units denominated in other currencies, the number of votes is calculated by multiplying the nominal value of the number of units held by the unit holder by the exchange rate at 16:00 GMT against DKK one week prior to the general meeting and dividing the result by 100. The resulting number of votes is rounded down to the nearest whole number. However each investor has at least one vote.

No investor may on his own behalf cast a vote of more than 1% of the total nominal value of units in circulation from time to time or 1% of the total nominal value of all funds when voting about common business.

Any investor has the right to attend the general meeting by proxy. The instrument of proxy, which must be presented, must be in writing and dated. An instrument of proxy to the Board of Directors may not be given for a period exceeding 12 months and must be given in respect of a specific general meeting where the agenda has been communicated in advance.

22. Amendment of Articles of Association, merger and liquidation etc

At a general meeting investors may resolve to dissolve the Investment Fund or the fund. A qualified majority is required, cf Article 18 of the Articles of Association.

Examples of circumstances that may result in the dissolution of the Investment Fund, a fund or a unit class are where the assets of the respective Investment Fund, fund or unit class are so limited that it is unprofitable from a cost and risk diversification perspective to operate the entity or where access to invest capital in one or several markets is cut off or in similar situations.

23. Investment management company

The day-to-day management is carried out by Syd Fund Management A/S according to the agreement concluded with the Investment Fund's investment management company.

Syd Fund Management A/S
Peberlyk 4, 6200 Aabenraa, Denmark
CVR No 21 27 40 03
Danish FSA no 17103

Two thirds of the company is owned by Sydbank A/S, which is also the custodian of the Investment Fund and of the remaining share of other cooperating financial institutions.

The executive management of the investment management company consists of Steffen Ussing, CEO.

The Investment Fund has concluded an agreement with the company whereby the company undertakes the day-to-day management of the Investment Fund in accordance with the Danish Financial Business Act, the Danish Investment Associations, etc. Act, the Articles of Association of the Investment Fund and instructions issued by the Board of Directors of the Investment Fund, including investment limits applying to the individual funds. The Investment Fund may terminate

the agreement at a notice of 6 months. Syd Fund Management A/S may terminate the agreement at a notice of 18 months for expiry at the end of a financial year.

Under the agreement the company enters into agreements regarding portfolio advice/management, distribution and other services relating to the funds and unit classes of the Investment Fund subject to approval by the Board of Directors of the Investment Fund.

The payment to Syd Fund Management A/S consists of an administration fee, a portfolio management fee and a distribution fee. The fees appear from the table in 28.

24. Remuneration to the Board of Directors, the investment management company and the Danish Financial Supervisory Authority

Board members' remuneration is approved by the general meeting. Fees to the Danish FSA are according to invoice. The fees appear from the table below. The budgeted fees may deviate from the actual fees.

	2023 (DKK 1,000)
Board of Directors	825
Investment management company	52,994
Danish FSA	608

25. Articles of Association, Key Investor Information and payment information

The Articles of Association of the Investment Fund, prospectuses and Key Investor Information can be downloaded free of charge from the website stated in item 1 of this prospectus. Furthermore the material is available free of charge at the premises of Syd Fund Management A/S and at Sydbank's branches. The Articles of Association of the Investment Fund form an integral part of the full prospectus and must be provided together with the prospectus.

Specifically as regards unit class B

The material is available at the website stated in item 1 of this prospectus.

Furthermore the banks listed below will accept redemption and switching orders as well as all payments destined for investors.

Sydbank A/S, Flensburg Branch
Rathausplatz 11, 24937 Flensburg, Germany

Sydbank A/S, Hamburg Branch
Am Sandtorkai 54, 20457 Hamburg, Germany

Sydbank A/S, Kiel Branch
Wall 55, 24103 Kiel, Germany

Specifically as regards unit class I

The material is available at the website stated in item 1 of this prospectus.

Furthermore the banks listed above for unit class B will accept redemption and switching orders as well as all payments destined for investors. However only banks in countries where unit class I is being marketed may be used.

26. Annual report

The annual report and the interim report with the financial results are made up according to generally accepted accounting policies and in accordance with the Danish Investment Associations, etc. Act and any Danish executive orders in force from time to time.

Quarterly investor information, the interim report and the audited annual report can be downloaded free of charge from the Investment Fund's website and are available free of charge at the premises of Syd Fund Management A/S and at Sydbank's branches.

The material is available at the website stated in item 1 of this prospectus.

27. Custodian

Sydbank A/S
CVR No 12 62 65 09
Central Depot
Peberlyk 4, 6200 Aabenraa, Denmark

The Investment Fund has concluded an agreement with Sydbank whereby the bank as a custodian verifies and keeps in custody the Investment Fund's financial instruments. The custodian is obliged to ensure that the Investment Fund's financial instruments are kept separate for each of the Investment Fund's funds in accordance with the law, including the Danish Financial Business Act and the Danish Investment Associations, etc. Act. The custodian will be liable for the Investment Fund's and the investors' loss of the Investment Fund's financial instruments which are held in custody. However the custodian will not be liable if the loss was caused by external events which the custodian could not reasonably be expected to control and the consequences of which would have been unavoidable even though the custodian had taken every reasonable precaution.

The custodian has delegated the task of safe custody of foreign financial instruments to JP Morgan SE, SEB and UBS Switzerland AG. JP Morgan SE, SEB and UBS Switzerland AG have sub-delegated some of the safe custody tasks to other financial institutions. A list of the financial institutions carrying out safe custody tasks for the custodian is available on the Investment Fund's website here:

https://www.sydinvest.dk/Admin/Public/DWSDownload.aspx?File=%2fFiles%2fFiler%2f0_Sydinvest%2fDownload%2fPDF%2fNyheder%2fSydinvest-Liste-depotbanker-og-subcustodians_2022.pdf. Updated information will be made available to investors on request. Delegation of any safe custody task to a third party will not affect the custodian's liability for the loss of financial instruments.

Either party may terminate the custodian agreement at a notice of 6 months for expiry at the end of a month. Sydbank A/S owns more than two thirds of the shares of the Investment Fund's investment management company, Syd Fund Management A/S. As a consequence of the group relation between the companies the investment management company cannot be considered impartial in the assessment of the terms and conditions of agreements with the custodian. In order to adequately ensure impartiality and handle conflicts of interest, agreements about custodian fees will be concluded by the Investment Fund's Board of Directors. Syd Fund Management A/S has formulated a policy for the handling of conflicts of interest, which is available on request. In return for these services each unit class in a fund will pay a custody fee on the basis of the type of financial instruments. The custody fee is the same for each unit class in a fund, see 28. The custody fee is calculated on the basis of the average assets of a unit class.

28. Agreements – administration, portfolio advice, market making and distribution

Administration agreement

The administration fee covers payment for the management company's day-to-day management of the Investment Fund as well as other costs incurred by the Investment Fund, including costs relating to the Board of Directors, executive management, audit, the Danish FSA and other public authorities, stock exchanges, general meetings, register of unit holders, market-making, ESG advice as well as information and marketing activities. The custody fee is included in the administration fee.

Total administrative costs, including costs relating to the Board of Directors, administration, IT, audit, supervision, marketing, distribution and the custodian, in respect of each fund or unit class may not exceed 2% of the average assets of the fund or unit class within any financial year. Transaction costs are not included in the administrative costs mentioned above.

With respect to investments in products marketed under the Sydinvest name, costs of the underlying product relating to portfolio management are refunded and any distribution fees are reimbursed.

Sales and information costs are included in total administrative costs.

Portfolio management agreement

As regards actively managed funds and unit classes Syd Fund Management A/S has concluded a portfolio advice agreement as regards the investment of its assets with Sydbank, which owns two thirds of the Investment Fund's investment management company and is the custodian of the Investment Fund. As a result the bank prepares macro-economic analyses and investment proposals used as input by Syd Fund Management's investment department in its formulation of an investment strategy and its subsequent implementation. Either party may terminate the agreement at a notice of 3 months for expiry at the end of a quarter. The agreement may be terminated with immediate effect if deemed in the interest of the UCITS managed. In actively managed funds and unit classes Syd Fund Management A/S charges 0.01 percentage point more than stated below, which is payment for Syd Fund Management A/S making the investment decision.

Authorisation has been given by the Board of Directors of the Investment Fund for Sydbank, in connection with its advisory services to the Investment Fund, to receive advice on emerging market bonds from EM-Quest Capital LLP, which is registered and regulated by the Financial Conduct Authority in the UK under FCA no. 555900.

Sydbank A/S

CVR No 12 62 65 09

EM-Quest Capital LLP

Registered Company number: OC363025
4th Floor
Rex House
4-12 Regent Street
London SW1Y 4RG, England

In return for these services each fund or unit class will pay a management fee on the basis of the type of security. The annual fee rates of each fund are set out below.

Market making

Syd Fund Management A/S has concluded an agreement with Sydbank A/S to the effect that, subject to special circumstances, the bank will quote prices at regular intervals for instance in the Nasdaq Copenhagen A/S trading systems as regards the units of the funds/unit classes for the purpose of promoting liquidity in the trading of units. Market making must involve bid and offer prices on the basis of the current issue and redemption prices, see 12.

Sydbank A/S does not receive a fee for this service. Either party may terminate the agreement at a notice of 30 days.

Agreement on distribution of units

Syd Fund Management A/S will pay to Sydbank a distribution fee regarding unit classes A and B at the rates stated in the tables below of the value of the Investment Fund's units the sale of which has been arranged for through Sydbank's branches and investment centres. The fee is for providing advisory services regarding the units to the bank's clients without separate payment.

31. Complaints officer

Where a complaint concerns own accounts, custody accounts or advice on investing in the Investment Fund, the regular account manager must be contacted. Where a complaint concerns issues concerning Investeringsforeningen Sydinvest a complaint may be filed with:

Syd Fund Management A/S
Peberlyk 4
6200 Aabenraa, Denmark
Attn: Complaints Officer
Marked: "Klage"

Email: si@sydinvest.dk

If a complaint is not upheld, the Danish Financial Complaint Board can be contacted:

Secretariat for the Danish Financial Complaint Board
St. Kongensgade 62, 2.
1264 Copenhagen K, Denmark

Email: sek@fanke.dk
Tel: +45 35 43 63 33
Website: <https://fanke.dk>

Business investors can only expect to have a complaint reviewed if it does not differ significantly from a complaint regarding a private investor.

The places of payment and information in Germany (“deutsche Zahl- und Informationsstellen”) are listed in item 35 of this prospectus.

The German places of payment and information will accept redemption and switching orders. All payments to investors, including redemption proceeds and distribution, if any, as well as other payments can be settled through the German places of payment and information at the request of the investor.

The Investment Fund’s prospectus, Key Investor Information, Articles of Association, interim reports and the audited annual report are available free of charge at the places of payment and information.

Information on the net asset values of units, issue and redemption prices are available at the places of payment and information as well as at the Investment Fund’s website on all banking days. Furthermore issue and redemption prices are published on the electronic platform www.fundinfo.com on all banking days.

The Investment Fund’s unit classes B are tax transparent funds and tax information (ausschüttungsgleiche Erträge) is reported to and published in Bundesanzeiger. Other information to investors is available at the German places of payment and information and is published in compliance with Danish legislation.

As regards the Investment Fund's unit classes B, targeting German investors, the determination of dividends in the fund complies with the provisions of the Danish Tax Assessment Act on minimum income as well as German statutory provisions (Investmentsteuergesetz) on amounts available for distribution.

Information included under "Articles of Association, Key Investor Information and payment information" above is available free of charge at the Investment Fund as well as at the German places of payment and information.

34. Specific risks due to tax provisions on disclosure requirements in Germany

The Investment Fund is obligated for instance to substantiate the published tax base at the request of the German tax authorities. The basis of calculation of such information is open to interpretation and it cannot be guaranteed that the German tax authorities will accept all aspects of the method applied by the Investment Fund.

Moreover investors should be aware that as a rule corrections in case of errors are not made retroactively but are generally effective as of the financial year in question. Similarly a correction may represent an advantage or a drawback to investors who have received dividends or to whom accumulated amounts have been credited during the financial year.

35. Tax rules in accordance with the German investment tax reform (effective 1 January 2018)

The information on the tax rules applies to investors who are fully liable to tax in Germany and is based on the current legislative framework. No guarantee can be given that the tax assessment will not change as a result of legislation, case law or decisions made by the tax authorities.

Taxation can depend on various individual factors that are not considered here. Consequently we recommend that investors consult a tax consultant about their personal tax situation.

We recommend that, before purchasing units in the funds described in this Prospectus, investors who are not fully liable to tax in Germany clarify any tax implications of purchasing units with a tax consultant in their home country.

I. Taxation of funds

In Germany foreign funds are partially subject to corporate income tax if they generate domestic investment income and other domestic income on the basis of the limited income tax liability (with the exception of gains from the sale of holdings in limited liability companies). The corporate tax rate currently represents 15%.

II. Taxation of investors

With respect to private investors, investment returns (the funds' distributions, advance lump-sum amounts (Vorabpauschalen) and gains from the sale of units) are as capital income subject to income tax if they exceed, together with any other income from capital, the savers' exemption amount (Sparer-Pauschbetrag) of EUR 801 (for singles or separately assessed spouses) and EUR 1,602 (for jointly assessed spouses) per year. In certain circumstances a fixed amount of these investment returns is tax-exempt for investors (partial exemption).

Capital income is generally subject to 25% tax (plus a solidarity surcharge and church tax, if any).

For private investors the tax withheld generally acts as a final payment ("final withholding tax" (Abgeltungssteuer)), which means that income from capital does not usually have to be disclosed in the income tax return. As a general rule, when deducting the tax, the custodian will already have offset any loss as well as any foreign withholding tax deriving from the direct investment.

However the withholding tax does not have the effect of a final payment in cases where the personal tax rate is lower than 25%. In such cases capital income can be reported in the income tax return. The tax authorities will then use the lower personal tax rate and offset the tax deduction against the personal tax liability (known as the "reduced rate test" to identify the most favourable option for the investor).

If capital income has not been taxed (for instance if it is held in a custody account abroad or because a gain from the sale of units has been achieved in a foreign custody account), the income must be disclosed in the income tax return. Consequently, in connection with the tax assessment, this capital income is also subject to the final withholding tax of 25% or the lower personal tax rate.

If the units form part of the business assets, the return from the funds is treated as operating income for tax purposes.

Dividend distribution

As a general rule distributions are subject to tax as regards private investors.

If the fund meets the tax criteria of an equity fund, 30% of the distribution is tax-exempt for private investors (partial exemption). Funds that according to the investment conditions at all times invest at least 51% of their assets in equities qualify as equity funds. If the fund meets the tax criteria of a mixed fund, 15% of the distribution is tax-exempt for private investors (partial exemption). Funds that according to the investment conditions at all times invest at least 25% of their assets in equities qualify as mixed funds. If a fund does not meet the tax criteria of an equity fund or a mixed fund there is no partial exemption in connection with distributions.

As regards business investors, distributions are as a rule subject to income tax, corporate tax and trade tax. If the fund qualifies as an equity fund for tax purposes, the tax exemption applying to distributions is 60% with respect to income tax and 30% with respect to trade tax if the units belong to natural persons and form part of the business assets (partial exemption). As regards companies liable to pay tax, the tax exemption applying to distributions is as a rule 80% with respect to corporate tax and 40% with respect to trade tax (partial exemption). Where the company is a life assurance company or a general insurance company and where the units are included as an investment or where the company is a credit institution where the units are included under the trading portfolio or have been acquired with a view to rapidly achieving a gain on own holdings, the tax exemption applying to distributions is 30% with respect to corporate tax and 15% with respect to trade tax (partial exemption).

If the fund qualifies as a mixed fund for tax purposes, the tax exemption applying to distributions is 30% with respect to income tax and 15% with respect to trade tax if the units belong to natural persons and form part of the business assets (partial exemption). As regards companies liable to pay tax, the tax exemption applying to distributions is as a rule 40% with respect to corporate tax and 20% with respect to trade tax (partial exemption). Where the company is a life assurance company or a general insurance company and where the units are included as an investment or where the company is a credit institution where the units are included under the trading portfolio or have been acquired with a view to rapidly achieving a gain on own holdings, the tax exemption applying to distributions is 15% with respect to corporate tax and 7.5% with respect to trade tax (partial exemption).

If distributed dividends are held in a domestic custody account, they are usually taxed at a rate of 25% (plus a solidarity surcharge and church tax, if any). As a general rule the partial exemption applying to equity funds and mixed funds can be taken into account already in connection with the tax withheld. If so the partial exemption rates applying to private investors are used as the standard rates, ie 30% in connection with equity funds and 15% in connection with mixed funds, also for business investors.

Advance lump-sum amount

The advance lump-sum amount is the amount by which the fund's distributions within a calendar year are lower than the so-called basic return for the calendar year in question. The basic return is calculated by multiplying the redemption price of the unit at the beginning of a calendar year by 70% of the basic interest rate determined on the basis of the long-term realisable return on public bonds. The basic return is limited to the surplus amount arising between the first and last redemption price determined during the calendar year plus distributions during the calendar year. In the year when the unit is acquired the lump-sum amount is reduced by one twelfth for each full month preceding the month of acquisition. The lump-sum amount is deemed accrued on the first weekday of the following calendar year.

As a rule lump-sum amounts are subject to tax as regards private investors. If the fund meets the tax criteria of an equity fund, 30% of the lump-sum amount is however tax-exempt for private investors (partial exemption). Funds that according to the investment conditions at all times invest at least 51% of their assets in equities qualify as equity funds. If the fund meets the tax criteria of a mixed fund, 15% of the lump-sum amount is tax-exempt for private investors (partial exemption). Funds that according to the investment conditions at all times invest at least 25% of their assets in equities qualify as mixed funds. If a fund does not meet the tax criteria of an equity fund or a mixed fund there is no partial exemption in connection with the lump-sum amount.

As regards business investors the lump-sum amount is as a rule subject to income tax, corporate tax and trade tax. If the fund qualifies as an equity fund for tax purposes, the tax exemption applying to the lump-sum amount is 60% with respect to income tax and 30% with respect to trade tax if the units belong to natural persons and form part of the business assets (partial exemption). As regards companies liable to pay tax, the tax exemption applying to the lump-sum amount is as a rule 80% with respect to corporate tax and 40% with respect to trade tax (partial exemption). Where the company is a life assurance company or a general insurance company and where the units are included as an investment or where the company is a credit institution where the units are included under the trading portfolio or have been acquired with a view to rapidly achieving a gain on own holdings, the tax exemption applying to the lump-sum amount is 30% with respect to corporate tax and 15% with respect to trade tax (partial exemption).

If the fund qualifies as a mixed fund for tax purposes, the tax exemption applying to the lump-sum amount is 30% with respect to income tax and 15% with respect to trade tax if the units belong to natural persons and form part of the business assets (partial exemption). As regards companies liable to pay tax, the tax exemption applying to the lump-sum amount is as a rule 40% with respect to corporate tax and 20% with respect to trade tax (partial exemption). Where the company is a life assurance company or a general insurance company and where the units are included as an investment or where the company is a credit institution where the units are included under the trading portfolio or have been acquired with a view to rapidly achieving a gain on own holdings, the tax exemption applying to the lump-sum amount is 15% with respect to corporate tax and 7.5% with respect to trade tax (partial exemption).

If the lump-sum amount is held in a domestic custody account, it is usually taxed at a rate of 25% (plus a solidarity surcharge and church tax, if any). As a general rule the partial exemption applying to equity funds and mixed funds can be taken into account already in connection with the tax withheld. If so the partial exemption rates applying to private investors are used as the standard rates, ie 30% in connection with equity funds and 15% in connection with mixed funds, also for business investors.

Gain from sale at investor level

Where units in the fund are sold any gain is as a rule taxed as income as regards private investors. If the fund meets the tax criteria of an equity fund, 30% of the gain is however tax-exempt for private investors (partial exemption). Funds that according to the investment conditions at all times invest at least 51% of their assets in equities qualify as equity funds. If the fund meets the tax criteria of a mixed fund, 15% of the gain is tax-exempt for private investors (partial exemption). Funds that according to the investment conditions at all times invest at least 25% of their assets in equities qualify as mixed funds. However investors may not deduct any loss from the sale of units corresponding to the partial exemption in force. If a fund does not meet the tax criteria of an equity fund or a mixed fund there is no partial exemption in connection with gains from sale.

When calculating the gain from sale the advance lump-sum amounts determined during the ownership period are deducted from the gain.

The tax liability of private investors in connection with gains from sale also applies in cases where the units sold are so-called "old units", ie units acquired before 1 January 2018. Furthermore they are regarded as sold on 31 December 2017 and reacquired on 1 January 2018. However the gain from this fictitious sale on 31 December 2017 is not taxed until the units are actually sold. Therefore with respect to old units the calculation of gains subject to taxation on the date of the actual sale is divided into 2. Any change in the value of the old units occurring between the time of acquisition and 31 December 2017 is included in the calculation of the fictitious gain from the sale on 31 December 2017. Any change in the value of the old units occurring on or after 1 January 2018 is however included in the calculation of the gain from the actual sale.

Old units acquired before the introduction of final withholding tax, ie before 1 January 2009, are grandfathered units as regards private investors. Any changes in value until 31 December 2017 as regards these grandfathered units are tax-exempt. Changes in value occurring on or after 1 January 2018 as regards grandfathered units are only subject to taxation if the gain exceeds EUR 100,000. This allowance can only be used if the private investor discloses the gains to the relevant tax authorities.

As regards business investors gains from sale are as a rule subject to income tax, corporate tax and trade tax. If the fund qualifies as an equity fund for tax purposes, the tax exemption applying to gains from sale is 60% with respect to income tax and 30% with respect to trade tax if the units belong to natural persons and form part of the business assets (partial exemption). As regards companies liable to pay tax, the tax exemption applying to gains from sale is as a rule 80% with respect to corporate tax and 40% with respect to trade tax (partial exemption). Where the company is a life assurance company or a general insurance company and where the units are included as an investment or where the company is a credit institution where the units are included under the trading portfolio or have been acquired with a view to rapidly achieving a gain on own holdings, the tax exemption applying to gains from sale is 30% with respect to corporate tax and 15% with respect to trade tax (partial exemption).

If the fund qualifies as a mixed fund for tax purposes, the tax exemption applying to gains from sale is 30% with respect to income tax and 15% with respect to trade tax if the units belong to natural persons and form part of the business assets (partial exemption). As regards companies liable to pay tax, the tax exemption applying to gains from sale is as a rule 40% with respect to corporate tax and 20% with respect to trade tax (partial exemption). Where the company is a life assurance company or a general insurance company and where the units are included as an investment or where the company is a credit institution where the units are included under the trading portfolio or have been acquired with a view to rapidly achieving a gain on own holdings, the tax exemption applying to gains from sale is 15% with respect to corporate tax and 7.5% with respect to trade tax (partial exemption).

If the gain from sale is held in a domestic custody account, it is usually taxed at a rate of 25% (plus a solidarity surcharge and church tax, if any). As a general rule the partial exemption applying to equity funds and mixed funds can be taken into account already in connection with the tax withheld. If private investors sell units at a loss the loss must be set off against other positive capital income. If, during the same calendar year, positive capital income is generated at the custodian carrying out the tax deduction, the custodian will set off the loss.

As regards business investors gains from sale are not usually subject to taxation.

Change in existing partial exemption rate

If the applicable partial exemption rate changes or if the conditions for partial exemption no longer apply, the unit is regarded as sold and repurchased on the following day. The gain deriving from this fictitious sale is however not regarded as accrued until the date of the actual sale of the unit.

Taxation in connection with winding-up

Where a fund is wound up distributions are considered to be returns only if they include the increase in value in a calendar year.

Foreign withholding tax

In some cases withholding tax on the fund's foreign return is deducted in the country of origin. This withholding tax cannot be used by investors to reduce the tax amount.

Tax implications of mergers

The merger of a fund with another fund in accordance with provisions of the German Investment Tax Act does not result in the disclosure of hidden reserves at investor level, ie the procedure is tax neutral. In this respect the funds must be subject to the same law of the foreign state providing administrative assistance and collection assistance. If the investors of the discontinuing fund receive a cash payment, the payment must be treated as a dividend distribution.
